Sixty-fourth session
Item 63 of the provisional agenda*
Social development, including questions relating to
the world social situation and to youth, ageing,
disabled persons and the family

Realizing the Millennium Development Goals for persons
with disabilities through the implementation of the World
Programme of Action concerning Disabled Persons and the
Convention on the Rights of Persons with Disabilities

Report of the Secretary-General

Summary

The present report is submitted pursuant to General Assembly resolution
63/150 and focuses on the situation of persons with disabilities with respect to the
realization of the Millennium Development Goals and on lessons learned and
synergies and complementarities achieved, based on the implementation of the World
Programme of Action concerning Disabled Persons, the Standard Rules on the
Equalization of Opportunities for Persons with Disabilities and the Convention on
the Rights of Persons with Disabilities. The report provides information on the
situation of persons with disabilities in the context of the Millennium Development
Goals and the implementation of the World Programme of Action and the efforts
towards mainstreaming disability in development.

Introduction

1. The present report is divided into three sections. Section I discusses the linkages between disability and the Millennium Development Goals. Section II analyses the situation of persons with disabilities in the context of the Goals, including information from Millennium Development Goals country reports, discussion of Millennium Development Goal monitoring and data on disability and actions and initiatives towards the realization of the Millennium Development Goals for persons with disabilities by Member States, United Nations entities and non-governmental organizations (NGOs). The report concludes with section III, which offers conclusions and recommendations. The preparation of the report was facilitated by an expert group meeting entitled “Mainstreaming disability in Millennium Development Goal policies, processes and mechanisms: development for all”, organized by the Department of Economic and Social Affairs with the support of the World Health Organization (WHO) and held in Geneva from 14 to 16 April 2009.

I. Disability and the Millennium Development Goals

2. The World Programme of Action concerning Disabled Persons, the Standard Rules on Equalization of Opportunities for Persons with Disabilities and the Convention on the Rights of Persons with Disabilities recognize persons with disabilities as both development agents and beneficiaries in all aspects of development.

3. The periodic review of the Millennium Development Goals provides an entry point for the assessment of how persons with disabilities fare in comparison to the population at large in relation to achieving the Goals, particularly poverty eradication, universal primary education, reducing child mortality, improving maternal health, and combating HIV/AIDS.

4. While persons with disabilities make up an estimated 10 per cent of the world’s population, it has been suggested that disability could be associated with 20 per cent of the global population living in poverty.1 Notwithstanding the commitment of the United Nations to the rights of persons with disabilities and the recognition by the 2005 World Summit Outcome2 of the immediate need for persons with disabilities to be able to exercise their rights without discrimination, disability is largely invisible in the implementation, monitoring and evaluation of the Millennium Development Goals. The terms “disability” and “persons with disabilities” do not appear in the Millennium Development Goals nor in the targets and indicators that operationalize Millennium Development Goal-related efforts. They are also missing from the accompanying guidelines, policies, programmes and conferences that are part of ongoing efforts related to the Millennium Development Goals. As a consequence, periodic reviews of the Millennium Development Goals that are under way within the United Nations do not include reference to disability issues or persons with disabilities.

---

2 General Assembly resolution 60/1, para. 129.
5. A series of conferences and meetings on disability and the Millennium Development Goals were organized by Governments, regional organizations and organizations of persons with disabilities. These meetings led to insightful discussions and recommendations on how to mainstream disability and include persons with disabilities in all Millennium Development Goals. However, this body of work has not yet reached outside the disability community itself.

II. The situation of persons with disabilities in the context of the Millennium Development Goals

A. Millennium Development Goal country reports: a desk review

6. An analysis of the references to persons with disabilities in Millennium Development Goal country reports may provide valuable information about the extent and ways in which disability and persons with disabilities are included in programmes and policies. With this in mind, the Secretariat conducted a desk review of 80 such country reports from all regions from 2003 to 2009. The following are the preliminary findings based on data available to the Secretariat.

7. A total of 42 reports (52 per cent) made some reference to disability or persons with disabilities. These references included causes of disability, issues of concerns or challenges, and initiatives. Of those 42 reports, 16 included a reference to one or more initiatives specifically directed towards persons with disabilities. Twenty-eight reports mentioned disability in reference to “vulnerable” or “marginalized” groups or population “in need of special attention”. It may be noted that references to persons with disabilities in the context of population groups could be understood as an effort to mainstream disability. Other references were more specific to disability and persons with disabilities. None of the references provided detailed information nor elaborated on the issues or programmes concerned.

8. Some reports noted that persons with disabilities are among the poorest of the poor, the most deprived, and vulnerable; and that they tend to fall outside the reach of social services provided by the Government. They also recognized that special measures or attention might be required for persons with disabilities.

9. Most references to disability were related to social protection and safety nets (Goal 1), and education (Goal 2). Two reports contained data which show that the participation of persons with disabilities in gainful employment is very low. When they work, persons with disabilities receive remuneration that is significantly lower than that of non-disabled workers and in very few instances are work conditions adapted to the needs of persons with disabilities. According to the country report of Thailand (2008), for instance, less than half the number of people with disabilities was employed and they received on average only two thirds of the income earned by other workers. In Serbia, it was reported that, in 2005, only 13 per cent of persons with disabilities had an opportunity to work, one third of them had working conditions adapted to their need. Although the problems of unemployment and unequal pay are prevalent throughout the world, the lack of reference to these issues

3 Selected Millennium Development Goal country reports are available in English, French and Spanish at the United Nations Development Group and United Nations Development Programme Millennium Development Goals websites, and are searchable electronically.
in other country reports could be a reflection of the generally low priority given to
the employment of persons with disabilities.

10. In the area of education, issues and challenges include access to adequate
education for persons with sensory, physical and developmental disabilities; weak
identification and assessment mechanisms of children with disabilities to ensure
adequate education; and difficulty and high cost of providing primary education to
those with disabilities in geographically disperse areas. The country report from
Thailand provides an illustrative case, namely, that approximately three quarters of
people with disabilities either had no education or less than a primary education.

11. One reference to gender perspectives (Goal 3) was made in relation to women
as caregivers of persons with disabilities, while another report stressed the need to
understand how gender equality was affected by different factors, such as disability.
The only initiative mentioned specific to women with disabilities was a one-time
financial assistance for women with disabilities.

12. References to access to obstetric, prenatal and post-natal care for women and
children (Goals 4 and 5) were made only in the context of how the lack of adequate
access is a cause of disability, but no reference was made to access to this care by
women and children with disabilities. Other causes of disability mentioned are
malnutrition among children (Goal 1) and vaccine-preventable diseases (Goal 4).

13. One report made reference to the vulnerability of persons with disabilities to
the effects of HIV/AIDS (Goal 6), owing, perhaps, to the lack of preventive
education, given the presumptions made about the absence of sexual activity among
persons with disabilities, or to the lack of accessibility to information and adequate
services and treatment. Another report mentioned the impact of environmental
degradation on persons with disabilities (Goal 7), as it adds additional barriers and
difficulties to their everyday living situation.

14. Initiatives mentioned in the reports are related to inclusive education, health
care and rehabilitation, pensions and cash benefits. Examples of initiatives specific
to persons with disabilities include: a disability survey in 2002 (Maldives, 2007); a
registry of persons with disabilities (Chile, 2005); a Prevention Programme for
Disabled Persons (Croatia, 2005); a Service of Personal Assistants to Persons with
Disabilities programme (to encourage persons with disabilities to become active and
to work) (Serbia, 2005); policy for persons with disabilities; incorporating disability
reduction targets in the National Health-Care Policy (Liberia, 2004); taking steps
towards inclusive education (Bahrain, 2007; Chile, 2005; Fiji, 2003; Kazakhstan,
2005; Kenya, 2005; Serbia, 2005; Thailand, 2008 and the United Republic of
Tanzania, 2006); and a conference on the rights of persons with disabilities (Brazil,
2007). One report mentioned that the poverty reduction strategy emphasizes the
urgent need to devote special attention to vulnerable populations, including persons
with disabilities (Serbia, 2005).

---

4 Mention of persons with disabilities among other groups were made in relation to the following
initiatives: poverty reduction efforts (Burkina Faso, 2003; China, 2008; Fiji, 2004; and Turkey,
2005); social security and assistance systems (Brazil, 2007; Bahrain, 2007; Cuba, 2005;
Georgia, 2005; Indonesia, 2004; and Republic of Korea, 2005); safety nets (Republic of Korea,
2005), including food security (Colombia, 2005) and care (Algeria, 2005; Saudi Arabia, 2005);
training (Algeria, 2005; Colombia, 2005 and Cuba, 2005); health (Ghana, 2003; and
Kazakhstan, 2005) and rehabilitation (Lebanon, 2003).
B. Millennium Development Goal monitoring and data on disability

15. The paucity of data on disability, as well as the wide variance of definitions, standards and methodologies used to identify the conditions of persons with disabilities continue to constitute an obstacle to the effective formulation of disability-inclusive policies and programmes, as well as in the monitoring and evaluation of progress in achieving the Millennium Development Goals. In many developed countries, disability statistics remain underdeveloped. Few countries collect information on disability through either censuses or surveys. To a significant extent, the dearth of socio-economic data on persons with disabilities reflects the social welfare and/or medical approach to disability that still prevails in many countries.

16. The following is an overview of available global data concerning the situation of persons with disabilities and the Millennium Development Goal indicators.

**Goal 1: eradicate extreme poverty and hunger**

17. Approximately 426 million people with disabilities in developing countries live below the poverty line and often represent the 15 to 20 per cent most vulnerable and marginalized poor in such countries.\(^5\) There is also evidence that participation in the labour force of persons with disabilities is significantly lower than for persons without disabilities.\(^6\)

18. Furthermore, persons with disabilities may have a lower standard of living than persons without disabilities with the same income, owing to their special need for services, such as transportation, heating, or medical services and adaptive devices. While the standard of living rises with income, households with greater needs because of the disability of one of its members tend to have a lower standard of living than that of other households with similar income.\(^7\)

**Goal 2: achieve universal primary education**

19. The United Nations Educational, Scientific and Cultural Organization estimates that, of the 75 million children of primary school age who are out of school, one third are children with disabilities and that over 90 per cent of children with disabilities in developing countries do not attend school.\(^8\)

**Goal 3: promote gender equality and empower women**

20. The educational needs of girls with disabilities have yet to be taken into account by those who work to promote gender equality and the empowerment of women, as well as those who work in the field of disability. In this context, there has

---

\(^7\) Jeanine Braithwaite and Daniel Mont, *Disability and Poverty: A Survey of World Bank Poverty Assessments and Implications* (HDNSP, the World Bank, February 2008), Discussion Paper No. 0805.

been limited research, as well as policy and programme development. Available data, mostly focused on literacy, indicate that women and girls with disabilities fare less well in the educational arena than either their male with disabilities or female without disabilities counterparts.\(^9\) While the literacy rate for adults with disabilities is as low as 3 per cent, in some countries, it is as low as 1 per cent for women with disabilities.\(^10\) Moreover, due to the lack of gender and disability-sensitized vocational training and counselling, as well as limited access to mathematics, science and technology for girls in general education, girls and women with disabilities are ill-prepared for the world of work.\(^9\)

21. In the area of employment, men with disabilities are almost twice as likely to have jobs as women with disabilities. The general trend is to have special initiatives for people with disabilities but without targeting women with disabilities.\(^11\)

**Goal 4: reduce child mortality**

22. Of the 200 million children reported to be living with disabilities, few of those living in developing countries have access to health and rehabilitation or support services. For example, they may miss out on vaccinations, or treatment for simple fever or diarrhoea, easily curable illnesses which can become life-threatening if left untreated.\(^12\)

**Goal 5: improve maternal health**

23. Many persons with disabilities marry and have children but often lack access to sexual and reproductive health information and services.\(^13\) As a consequence, their sexual and reproductive health has been neglected. People who are blind, deaf, or have intellectual or cognitive impairments find that information on sexual and reproductive health is often inaccessible to them. Moreover, because of the lack of physical access and of disability-related technical and human supports, as well as due to stigma and discrimination, sexual and reproductive health services are often inaccessible.\(^13\) Poverty further limits access to basic health services, including rehabilitation.

**Goal 6: combat HIV/AIDS, malaria and other diseases**

24. A growing literature indicates that individuals with disabilities are at equal or increased risk of exposure to all known risk factors.\(^14\) Due to a number of reasons, including insufficient access to appropriate HIV prevention and support services,

---

\(^11\) The right to decent work of persons with disabilities (Geneva, Switzerland, International Labour Organization, November 2007).

many persons with disabilities engage in behaviours which place them at risk of HIV infection. Moreover, a large percentage of persons with disabilities will experience sexual assault or abuse during their lifetime, with women and girls, persons with intellectual impairments and those in specialized institutions, schools or hospitals being at particularly high risk. At the same time, services offered at clinics, hospitals and in other locations may be physically inaccessible, lack sign language facilities or fail to provide information in alternative formats such as Braille, audio or “easy-to-understand” language.\footnote{15}

**Goal 7: ensure environmental sustainability**

25. An estimated 80 per cent of all people in the world with disabilities live in rural areas of developing countries and have limited or no access to the services they need.\footnote{16} An important factor in accessibility to water is proximity. The benefits can be tangible as proximity allows functionally disabled people to draw water by themselves; restricted access to water and sanitation services leads to a much higher risk for persons with disabilities for contracting diseases.\footnote{17} In situations of disasters, persons with disabilities are doubly vulnerable on account of impairments and poverty, yet, they are often ignored or excluded at all levels of disaster preparedness, mitigation and intervention.\footnote{18}

C. **Actions and initiatives towards the realization of the Millennium Development Goals for persons with disabilities by Member States, United Nations entities and non-governmental organizations**

1. **Member States**

26. The present section provides a summary of the 29 submissions received from Governments in response to the note verbale of 22 April 2009, in which the Secretariat requested information on views and experience in promoting the rights of persons with disabilities in achieving the Millennium Development Goals and on lessons learned and synergies and complementarities achieved based on the implementation of the World Programme of Action, the Standard Rules and the Convention on the Rights of Persons with Disabilities. Submissions were received from the following countries: Argentina, Australia, Bolivia, China, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, Finland, Greece, Hungary, Jamaica, Kenya, Kyrgyz Republic, Latvia, Malta, Mexico, Montenegro, the Philippines, Peru, Portugal, Republic of Korea, Russian Federation, Spain, Thailand, Togo, Trinidad and Tobago and Ukraine.

\footnote{16}{Facts on Disability in the World of Work” (International Labour Organization, Geneva, November 2007).}

\footnote{17}{Ronald Wiman and Jim Sandhu, Integrating Appropriate Measures for People with Disabilities in the Infrastructure Sector (National Research and Development Center for Welfare and Health, Deutsche Gesellschaft für Technische Zusammenarbeit and The German Federal Ministry for Economic Cooperation and Development, 2004).}

\footnote{18}{World Disasters Report 2007: Focus on Discrimination (Geneva, Switzerland, the International Federation of Red Cross and Red Crescent Societies, 2007).}
27. Several Governments indicate that they intended to achieve objectives of the Millennium Development Goals for persons with disabilities through the implementation of the Convention. Those efforts are discussed in more detail in the report of the Secretary-General to the sixty-fourth session of the General Assembly entitled “Status of the Convention on the Rights of Persons with Disabilities and the Optional Protocol thereto” (A/64/128). Therefore, the present section focuses on those areas that relate directly to the Millennium Development Goals, such as poverty reduction, education and health. The goal of global partnership is then addressed in the context of regional and international cooperation on disability issues.

Poverty

28. Persons with disabilities are particularly vulnerable to poverty. Providing financial support to persons with disabilities and their families who have limited resources is a policy approach common to countries such as Argentina, China, Cyprus, Ecuador, Egypt, Kyrgyz Republic, Latvia, Montenegro, Portugal and Thailand. The Kyrgyz Republic recently increased the part of its budget devoted to subsidizing access to services and residential facilities for persons with disabilities. The Philippines provides benefits and privileges on basic commodities, medicines and health services available. The Russian Federation recently adopted an act which aims at increasing the social protection of persons with disabilities.

29. Employment is an important component of poverty-reduction strategies. Several Member States have established employment quotas and provide economic incentives, as well as vocational training (see the following section) to increase the employability and employment of persons with disabilities. In Argentina, it is mandatory that at least 4 per cent of the employees in public entities be persons with disabilities. Bolivia requires that 4 per cent of the employees of companies that do business with the Government be persons with disabilities. In China, several cities have adopted similar quota requirements. Egypt reserves 5 per cent of Government positions for persons with disabilities, as does Jamaica. In Peru, all national Government entities are required to promote the employment of persons with disabilities. The Philippines is renewing policies for the equalization of opportunities and sustainable employment for persons with disabilities. Togo has provisions for the recruitment and employment of persons with disabilities in public administration.

30. Member States also provide economic incentives to increase employment and encourage entrepreneurship of persons with disabilities. Argentina gives economic support to microentrepreneurs with disabilities. Egypt encourages young persons with disabilities to become involved in small enterprises, productive family projects, women’s projects and other initiatives. Egypt has established professional evaluation centres to assist persons with disabilities to choose professions, as well as rehabilitation centres that train and assist persons with disabilities in (re)joining the labour market. Jamaica assists persons with disabilities in establishing their own businesses. Malta credits employers for three years of national insurance contributions for employing persons with disabilities. Portugal’s programme for setting up individually owned businesses is aimed at supporting and encouraging persons with disabilities to set up their own viable businesses. Spain instituted a General Strategy for the Employment of Persons with Disabilities 2008-2012, which includes time frames and programmatic and budgetary measures aimed at removing
physical, legal and sociocultural barriers to the employment of persons with disabilities. Ukraine carries out occupational rehabilitation and job training in 63 occupations for persons with disabilities.

**Education**

31. In order to achieve equal opportunities in education for children and adults with disabilities, several Governments have endorsed the principle and concept of inclusive education. Argentina passed a national education law that guarantees inclusive education through universal policies, and provides higher education scholarships for persons with disabilities. Cyprus is focusing on vocational training. Ecuador is establishing a National Project of Inclusive Education. Greece is considering a pilot project on sign language interpretation to enable students with hearing disabilities to follow regular classes. Similarly, Hungary is preparing a parliamentary act which will recognize the Hungarian sign language as an official language. Jamaica is seeking to make education more accessible and inclusive through its National Policy on Special Education. The Kyrgyz Republic is promoting inclusive education and has increased the access of regular schools to children with disabilities. Malta extended its financial support so that students with disabilities can receive the necessary support, even when attending private schools. Montenegro is taking measures to ensure inclusion and accessibility of all children and youth with disabilities into education programmes. The Philippines is in the process of improving accessibility of the environment and the inclusion of persons with disabilities in education.

**Gender equality**

32. Argentina has implemented a programme that promotes awareness and provides training on the rights of women with disabilities for the members of the National Council on Women and the National Advisory Commission for the Integration of Persons with Disabilities. Greece supports NGOs the activities of which contribute to empowering women from socially vulnerable groups who suffer multiple discriminations, including women with disabilities. Portugal is carrying out a study of the scope and depth of discrimination experienced by women with disabilities, with the main objective of finding solutions to preventing such discrimination. In 2006, Spain established a plan of action for women with disabilities.

**Health**

33. In Argentina, the National Advisory Commission for the Integration of Persons with Disabilities established a comprehensive cross-sectoral health plan with the aim of adapting health and sanitation services to the needs of persons with disabilities. Ecuador adopted measures for the early detection of childhood health conditions that could cause disabilities or are disability-related, including the purchase of medical equipment and the training of professional staff providing medical services to children with disabilities. Latvia developed policy guidelines and an action plan for the reduction of disability and its consequences. Mexico’s Programme of Integral Health Care for Persons with Disabilities, established in 2008, focuses on prevention, early detection, timely intervention and rehabilitation, as well as ensuring that persons with disabilities enjoy the right to the highest attainable level of health care without discrimination. Montenegro is implementing
measures to ensure equal access to medical facilities for persons with disabilities. The Philippines initiated efforts to mainstream disability issues in the mandates and programme of work of the Department of Health and its Committee on Disability is promoting inclusion of disability in every local Government unit in order to address specific health requirements of persons with disabilities, especially women and children with disabilities. In Portugal, preventing disabilities is an integral part of prenatal and post-natal care. Togo has programmes to prevent blindness.

**Regional and international cooperation**

34. Australia launched a disability-inclusive development assistance programme, entitled “Development for All”, in November 2008. It is the first strategy to guide Australia’s aid programme towards development that includes and deliberately focuses on persons with disabilities through a targeted and sequenced approach. A survey of Australia’s support for disability-inclusive development to date will be forthcoming in a companion volume to the “Development for All” strategy.

35. Bolivia and the Japan International Cooperation Agency are collaborating in the establishment of a registry of persons with disabilities to serve as a basis for future plans and projects. China has been actively undertaking international exchange and cooperation in the field of disability, and has provided various forms of aid and assistance to a number of developing countries. The Czech Republic funds disability-focused projects within the framework of its development cooperation and humanitarian aid in India, Mongolia, Serbia and Viet Nam.

36. Disability is one of the priorities of the overall strategy for Danish development cooperation, Partnership 2000. The strategy promotes a rights-based approach to poverty reduction. A variety of activities directly targeted at persons with disabilities have been supported through voluntary and earmarked contributions to a range of United Nations organizations, such as the United Nations Development Programme (UNDP) and the United Nations Children’s Fund (UNICEF). Bilateral assistance is also provided through embassy grants and support to Danish NGOs which work with local organizations of persons with disabilities.

37. The Finnish Development Policy Programme recognizes persons with disabilities as one of the most vulnerable groups and has made the promotion of their rights and opportunities a cross-cutting objective of all Finnish development cooperation projects.

38. Kenya hosted the Africa Regional Conference on Millennium Development Goals and Disability in September 2008, with over 200 representatives from all over the African continent. The conference was organized by the United Nations Millennium Campaign office in Africa, the Ecumenical Disability Advocates Network, the secretariat of the African Decade for Persons with Disabilities and the African Community Development Foundation and its purpose was to strengthen the organizational, advocacy and networking skills of disability leaders with reference to development issues.

40. Thailand is committed to advancing regional cooperation. It established, with the support of the Japan International Cooperation Agency, the Asia-Pacific Development Centre on Disability, which carries out cooperation programmes with countries in the region. The Centre, which was established in 2002, hosted in February 2009 the first Asia-Pacific Conference on “Community-based Inclusive Development: Persons with disabilities and their families” in collaboration with the World Health Organization (WHO), the Economic and Social Commission for Asia and the Pacific (ESCAP) and several NGOs. Thailand was also the main sponsor of the resolution adopted at the sixty-fourth session of ESCAP on “Regional Implementation of the Biwako Millennium Framework for Action and Biwako Plus Five towards an Inclusive, Barrier-free and Rights-based Society for Persons with Disabilities in Asia and the Pacific”.

2. United Nations system

41. The primary goal of the United Nations system with respect to the Millennium Development Goals is to support Governments and civil society in the realization of the Goals at the country level. The United Nations system also undertakes a range of activities at the regional and global levels that fosters development at the national level. The synergy between the three levels contributes to the effectiveness of the overall effort and the achievement of the Goals.

42. Many entities of the United Nations system have been working together to mainstream a disability perspective in their policy frameworks and programming. The Inter-Agency Support Group on the Convention on the Rights of Persons with Disabilities was established in December 2007, at the request of the United Nations System Chief Executives Board on Coordination, and works to ensure that the programmes and policies of the United Nations system are inclusive of persons with disabilities. To this end, the Group has drawn up a joint statement of commitment and is finalizing a draft common strategy and action plan that will constitute the basis for the concerted and coordinated work of the United Nations system related to persons with disabilities. The work of the Group focuses on policies, programmes, capacity-building, research and access to knowledge and accessibility, as well as on supporting the work of the Committee on the Convention on the Rights of Persons with Disabilities.

43. As Governments strive to build capacity and create policy frameworks that are consistent with meeting the Millennium Development Goals, United Nations country teams are often invited to provide support. The United Nations Development Group task team on disability — the core group of the Department of Economic and Social Affairs, the Office of the United Nations High Commissioner for Human Rights and the International Labour Organization (ILO) — are working with the United Nations Development Operations Coordination Office to develop guidelines on disability for the United Nations country teams. Below are examples of how United Nations entities work to further the realization of the Millennium Development Goals for persons with disabilities.

Poverty

44. ILO has undertaken a range of knowledge development, advocacy, capacity-building and technical cooperation initiatives to promote the “Decent Work for People with Disabilities” agenda. Its project, entitled “Promoting the employability...
and employment of persons with disabilities through effective legislation” supports
the review and reform of disability-related training on employment laws and
policies and their effective implementation in selected countries of East and
Southern Africa, Asia and the Pacific.

Education

45. The United Nations Educational, Scientific and Cultural Organization
(UNESCO) has undertaken a series of activities to promote the Education for All
agenda and issued a series of policy guidelines for inclusion in education at its
International Conference on Education, held at Geneva from 25 to 28 November
2008, which was devoted to “Inclusion: the Way of the Future”. UNESCO also
produced a DVD entitled “A World for Inclusion: Ensuring Education for All
through the UN Disability Convention”, which used footage from Finland, Kenya
and Turkey to address the situation of children with disabilities worldwide and the
importance of getting them into school.

46. As an integral part of the Child-Friendly School Initiative, UNICEF offers
other United Nations agencies and partners an opportunity to further support
country efforts to achieve Education for All and the Millennium Development
Goals. UNICEF also supports the integration of equity and inclusion issues in the
development, revision and appraisal of education sector plans, with a special focus
on the most disadvantaged children in society, including children with disabilities.
The support methodology is currently being piloted in the Kyrgyz Republic, Lesotho
and Malawi.

47. The Office of the United Nations High Commissioner for Refugees is
developing a strategy to address the educational needs of refugee children and
adolescents with disabilities in collaboration with civil society organizations.

Gender equality

48. The Department of Economic and Social Affairs and the United Nations
Population Fund (UNFPA), in collaboration with the Wellesley Centres for Women,
published “Disability Rights, Gender, and Development: A Resource Tool for
Action”. The publication is based on a training programme developed for the
Department of Economic and Social Affairs. Further efforts include the recently
released report by UNDP entitled “Pacific sisters with disabilities: at the intersection
of discrimination”. The report aims to identify the issues and challenges faced by
women and girls with disabilities in the Asia and Pacific region and to analyse
social and economic factors impacting their human rights.

49. The UNFPA Strategic Plan 2008-2011 provides guidance to UNFPA staff to
ensure that persons with disabilities participate in the design, implementation,
monitoring and evaluation of culturally and gender-sensitive policies and
programmes. In the Asia and Pacific region, UNFPA supports initiatives for women
with temporary or permanent disabilities resulting from gender-based violence. In
Swaziland, UNFPA provides support to training gender-based violence counsellors
and educators to provide services to persons with hearing and speech disabilities.
Infant health

50. In Croatia, UNICEF is carrying out a public campaign, entitled “First three are even more important”, to raise awareness of the need for early interventions and access to community-based support services for children with disabilities. The campaign is part of a wider project entitled “Rights, difficulties and opportunities of children with disabilities and their parents”, whereby UNICEF works with hospital maternity wards and paediatricians to increase their sensitivity when working with parents and newborn babies, as well as children with disabilities, to provide them with accurate information, and support planning and implementation of community-based services.

51. In cooperation with UNICEF, WHO is in the process of developing a manual for health-care providers working with children with disabilities (0-6 years) who experience participation restrictions as a result of their disability. WHO is also developing a road map for enhancing the development of children who may experience developmental delays and associated disabilities. The road map focuses on the needs of countries with minimal resources and addresses nutritional, medical, psychological and social risks of children experiencing developmental delay, including possible interventions.

Maternal health

52. WHO has been promoting maternal health of women with disabilities within the framework of community-based rehabilitation. It has also produced a global review of the literature on the mental health aspects of women’s reproductive health to help to meet the mental health needs of women during their sexual and reproductive lives.¹⁹ UNFPA is currently working with WHO to finalize a guidance note intended to help United Nations country offices and development partners to promote the inclusion of persons with disabilities in policies and programmes on a broad array of issues on sexual and reproductive health, including family planning, maternal health, HIV prevention and the fight against gender-based violence. In Bangladesh and Nepal, UNFPA has supported efforts to treat women who suffer from pregnancy-related disabilities, such as obstetric fistula and uterine prolapse.

HIV/AIDS

53. The Joint United Nations Programme on HIV/AIDS (UNAIDS), WHO and the Office of the United Nations High Commissioner for Human Rights have developed a policy brief on disability and HIV, which explores this often neglected intersection and contains policy recommendations. The brief discusses actions that need to be taken so that persons with disabilities have access to inclusive HIV services that are tailored to their diverse needs, and are also equal to the services available to others in the community.

3. Non-governmental organizations

54. Among the various initiatives undertaken by NGOs, the following two stand out:

(a) The International Disability and Development Consortium launched a website (www.IncludeEverybody.org) with support from the United Nations Millennium Campaign, which provides information on disability and the Millennium Development Goals; and (b) Inclusion International developed its own set of development goals based upon the Millennium Development Goals: “Inclusion International’s MDGs: Vision and Targets for 2015”.20 These goals are similar to the United Nations Millennium Development Goals, but are directed towards persons with disabilities and their families. Inclusion International also provides information about poverty-reduction efforts directed at persons with disabilities and inclusive education.21

III. Conclusions and recommendations

55. While there has been general progress towards the achievement of the Millennium Development Goals, it is difficult to assess whether and how much persons with disabilities have benefited. This reflects two basic facts. One is that available data show that policies and programmes related to the Millennium Development Goals have not fully addressed or specifically included disability and persons with disabilities. The other is the difficulties, both conceptual and practical, in obtaining sufficient and appropriate data on the situation of persons with disabilities. At the same time, while the data are limited, the information that does exist indicates that, in general, persons with disabilities are much worse off than the rest of the population.

56. The Millennium Development Goals were adopted at the Millennium Summit in the year 2000, six years before the adoption by the General Assembly in 2006 of the Convention on the Rights of Persons with Disabilities. The entry into force of the Convention provides an opportunity to invigorate this overlooked issue and aspect of development. The Millennium Development Goal policies and implementation can therefore be strengthened by the Convention’s normative standards and framework.22

57. In particular, the Convention states that the issue of accessibility for persons with disabilities is critical. This includes access to the physical environment and infrastructure, information and social services, particularly education and health care, as well as all participatory processes. Therefore, a logical step in both the development process and in advancing the rights of persons with disabilities in economic and social development is that the issue of accessibility should permeate all policies and activities in realizing the Millennium Development Goals for persons with disabilities.

58. International cooperation and the implementation of Millennium Development Goal 8, a global partnership for development, is crucial for the realization of the Millennium Development Goals for all, particularly for persons with disabilities. Cooperation efforts must ensure, in all Millennium Development Goal policies, that inclusiveness and accessibility are key components.21

Development Goal policies and implementation, access to and participation of persons with disabilities as both agents and beneficiaries of development. Accessibility is crucial to their participation as well as to benefiting from development, and in this regard, there is a great opportunity for international cooperation to have a strong and effective impact. Recently, in response to the adoption and ratification of the Convention, there have been several initiatives to integrate persons with disabilities into international cooperation at both the bilateral and multilateral levels. Cooperation with the private sector is also important to make available the benefits of new technologies, especially accessible information and communications technologies for all, for persons with disabilities.

59. In the light of the above, the General Assembly may wish to:

(a) Encourage Governments to develop and accelerate exchanges of information, experiences and practices regarding the situation of persons with disabilities and policy approaches to particular disability issues, particularly as they relate to accessibility. These exchanges may be particularly productive at the regional level, where countries may have similar socio-economic or cultural backgrounds with regard to the situations relating to persons with disabilities;

(b) Emphasize that participation of persons with disabilities at all levels of policymaking and development is critical to informing policymakers of the situation of persons with disabilities, the barriers they may face and ways to overcome obstacles to the full enjoyment of their rights, to the achievement of the Millennium Development Goals for persons with disabilities and for their socio-economic advancement;

(c) Encourage Governments to use the current 2010 census round, in which country population censuses will be conducted within the next three to five years, to fill some of the information and data gaps regarding the living conditions for persons with disabilities;

(d) Recognizing that censuses take time and often may not include sufficient detail regarding persons with disabilities, urge Governments to carry out surveys on the situation of persons with disabilities with respect to the Millennium Development Goals and specific disability-related barriers preventing their attainment.
