Annex

Results and resources framework for Kazakhstan (2016-2020) .................. 8
I. Programme rationale

1. In the past decade, Kazakhstan has made impressive gains in human development. In 2013, it ranked 70 out of 187 countries globally, according to the *Human Development Report* 2014. Its strategic vision – the Kazakhstan Strategy 2050 – prioritizes development pathways that expand people’s capabilities and choices. The country has been able to manage its resource-dependent economy prudently, but still struggles to fully diversify its economic base: the share of the small and medium enterprise (SME) contribution to GDP constituted only 17 per cent of the economy in 2014. Due to the sharp drop in oil prices in 2014, the country is preparing for a period of low growth: in 2015, about 1.5 per cent growth in gross domestic product (GDP) is projected, as opposed to the over 6 per cent growth in GDP the country enjoyed prior to 2014, according to the European Bank for Reconstruction and Development. In response, the Government has announced a cut in the Republican budget by at least 10 per cent in 2015 by 700 billion Kazakh tenge.

2. In 2014, the Government introduced a new economic stimulus package, *Nurly Zhol*. It represents a commitment to major investments in building new or modernizing existing public infrastructure – regional and municipal roads, transport systems, housing, utilities – as well as developing SMEs and creating jobs in non-extractive sectors. The *Nurly Zhol* package will keep intact current levels of social protection and social benefits, earmarking about 4.6 per cent of GDP annually. This policy is a concrete step towards diversifying policy options for building greater societal and economic resilience.

3. Inequalities between urban and rural areas, as well as among various social groups are widening: over 40 per cent of village residents are at risk of social exclusion, compared to 25 per cent in towns, according to the regional human development report. Inequalities in accessing quality services, especially in education and healthcare, persist, especially for vulnerable women, men and children living in poverty in rural areas. While poverty rates are generally low, at around 4 per cent (in 2013), rural poverty rates are triple that of urban areas. About 29 per cent of the economically active population, including more than 50 per cent of rural youth aged 16 to 24 are registered as ‘self-employed’, and face persistent challenges to securing sustainable livelihoods.

4. Kazakhstan has already achieved many of its national Millennium Development Goal (MDG) targets, especially in poverty reduction and education. In recent years, it has made rapid progress in maternal and other health indicators. The main MDG ‘unfinished business’ will be in goal 6 (HIV/AIDS, tuberculosis and other diseases) and goal 7 (environmental sustainability). Gender equality remains a high priority for the post-2015 development agenda, since women are considerably underrepresented in key decision-making bodies at national and local levels and, on average, earn 67 per cent of men’s salary. Even though the country had initially embraced the ‘green economy’ and ‘sustainability’ concepts, it remains to be seen whether it can fully implement them. The national and international dialogue on the sustainable development goals (SDGs) may positively contribute towards reenergizing this important vision.

5. Kazakhstan has made significant progress towards modernizing its system of governance and its public institutions. Strengthening the social contract becomes ever more relevant as Kazakhstan reaches the next level in institutional maturity, public services and political reforms. Kazakhstan was one of the first countries in the former Soviet region to pass a civil service law and introduce a merit-based system for the top and mid-level civil servants. In addition, the country adopted a new concept on local self-governance in 2013, and has committed to implementing a number of fiscal and administrative decentralization measures. In 2014, the Government was reshuffled and a leaner structure, comprising 12

---

3 Less than 20 per cent of local governors are women, and less than 30 per cent of seats in the Parliament are occupied by women.
ministries and one state agency, was introduced. However, much more remains to be done if, in line with its strategic vision, the country is to fulfill its aspirations of becoming one of the top 30 developed countries by 2050. The public institutions at all levels are still inundated by high levels of bureaucracy and inefficiencies. According to the Worldwide Governance Indicators compiled by the World Bank in 2012, the country has low rankings for accountability, control of corruption and rule of law.

6. The rapidly changing regional geopolitical situation influences Kazakhstan’s politics and policies. The Eurasian Economic Union that took effect in 2015 reinforces common economic and trade space between the Russian Federation, Belarus, Armenia and Kazakhstan, with other Commonwealth of Independent States countries such as Kyrgyzstan likely to join in later; while the country prepares to accede to the World Trade Organization. Moreover, the President and the Government value the presence of the United Nations in Kazakhstan and worldwide, and seek to actively contribute to the mission and purpose of the United Nations. As an emerging donor and an increasingly salient South-South cooperation actor, Kazakhstan is also playing an active role in championing the regional and global dialogues on the SDGs.

7. The UNDP country office will conduct a number of outcome evaluations in 2015, as indicated in the country programme action plan, 2010-2015, which will provide more evidence-based information on the UNDP contribution to development results. During this cycle, UNDP has emerged as a ‘partner of choice’ in supporting the Government in many of its development priorities, ranging from civil service reform to positioning itself as a regional convener/facilitator. This is evident from the steady increase in government cost-shared projects: from 4 per cent in 2010 to more than 50 per cent in 2015. National partners acknowledge the significant contributions UNDP has made towards supporting the efforts of Kazakhstan in: (a) equitable development at the local level; (b) preserving biodiversity and promoting sustainable natural resources management; (c) good governance and access to justice; and (d) promoting regional cooperation.

8. In the area of local development and reducing inequalities, the joint United Nations programme in the East Kazakhstan region is widely recognized as demonstrating the value of the joint United Nations-Government approach to scaling up social and economic services to the most vulnerable groups: Kazakh repatriates-oralmans, persons with disabilities and under-employed youth, women and men. An independent medium-term evaluation conducted in 2014 for this joint programme confirms this success, and further points out the necessity of building in more evidence-based, innovative approaches for the remaining period. Based on this experience, in 2013, the Government allocated an additional $13 million to the United Nations country team to launch joint programmes in the Kyzylorda and Mangystau regions. The three local development programmes have demonstrated the UNDP ability to support the implementation of national policies such as the national Road Map for Employment (2011-2020), and the National Programme on Development for Regions (2014-2020).

9. In the area of natural resources management, the outcome evaluation conducted in 2013 recognizes UNDP success in advancing the country’s policies and practices in conserving biodiversity, combatting land degradation, and introducing climate change adaptation in the agriculture sector (wheat). Based on evaluations of the Global Environmental Facility (GEF) projects, implemented by UNDP during the 2010-2015 period, UNDP is recognized by national and local partners as being at the forefront of promoting energy efficient technologies and sustainable transport solutions. The main lesson learned in this area is the necessity of transferring knowledge and capacities to national and local partners, both government and non-government, in order to achieve scaling up and sustainability.

According to internal expert assessments, about 50 per cent of the budgetary allocations are spent and delivered on a yearly basis, both at the national and subnational levels.
10. In the area of good governance, UNDP has worked with key government agencies to introduce a new model of civil service and public administration. As a result, the Regional Hub for Civil Service in Astana was established in 2013 as a platform to exchange knowledge and best practices in civil service modernization among Kazakhstan and other countries in the region. This promises to become one of the country’s major platforms for institutionalizing South-South and triangular partnerships. Ongoing UNDP efforts to promote a barrier-free environment and opportunities for all the persons with disabilities in the country resulted in ratification of the Convention on the Rights of People with Disabilities in 2015. Access to justice has been a priority for this country programme cycle: alternative dispute resolution mechanisms such as mediation, piloted by UNDP, have been integrated into the country’s new civil code.

11. Three years of UNDP efforts has culminated in Kazakhstan adopting an enabling legislation to establish the official development assistance (ODA) system, provisionally called KazAid. With the growing role of Kazakhstan as a middle-income country and an active international player, an unprecedented opportunity is presented for UNDP to promote regional cooperation as one of the main priorities in the new country programme cycle.

12. The theory of change for the country programme, 2016-2020, addresses two main problem issues: (a) the country’s ability to maintain development gains in the face of the anticipated economic slowdown; and (b) sustaining and scaling up the country’s position as an international facilitator and promoter of regional and global dialogues. Based on lessons learned, UNDP recognizes the need to introduce a ‘whole-of-society’ approach to effect lasting transformation in the areas of governance and civil service reforms, and economic diversification. UNDP will utilize its available resources and capacities more effectively and efficiently by focusing areas of work on fewer but more strategic priorities in this programme cycle. Critical to success will be strengthened intra-governmental coordination mechanisms and streamlined delivery of services on the ground, with full participation of all stakeholders, so that social and economic benefits and opportunities can be distributed fairly among all members of society.

II. Programme priorities and partnerships

13. Based on its ‘theory of change’, and in line with the national priorities identified in the Nurly Zhol medium-term plan and the longer-term Kazakhstan-2050 vision, reflected in the Government-United Nations Partnership Framework for Development, Kazakhstan, 2016-2020, UNDP will work at the nexus of inclusive and sustainable development, governance, and regional cooperation. UNDP will expand current partnerships and strengthen its role of a convener and facilitator between the Government, private sector, non-governmental organizations and communities, as well as United Nations organizations and other international bodies.

14. The government cost-sharing mechanism will remain a strategic choice for UNDP. By 2016, Kazakhstan, as a net contributing country, will cover at least 75 per cent of UNDP presence and core operations, with an increase to 100 per cent coverage during 2018-2020. This signals a new era of partnership, where transformative results are expected at a much greater scale and a higher level of impact. UNDP and the Government will develop an agreement to provide predictable, medium-term funding for this country programme cycle, with the aim of securing at least $12 million annually for key programmatic portfolios. UNDP will complement government cost-sharing by diversifying its resource mobilization and partnerships base, and focusing more on international banks, various development funds and the private sector.

15. During this cycle, UNDP will work towards contributing to three outcomes outlined in the Partnership Framework for Development. These programme priorities are inter-linked, based on a portfolio-based approach, and focus on: (a) diversification of the economy and provision of decent work opportunities for the underemployed and socially
vulnerable people; (b) sustainable human settlements, and natural resources management; (c) accountable and effective institutions accessible; and (d) regional cooperation and development. UNDP priorities also reflect the emerging aspirations for the SDGs, as important parallels exist between the global post-2015 development agenda and Kazakhstan’s 2050 strategy, which articulates a vision for the future that rests on core values of human rights, equity and sustainability.

16. The programme priorities correspond to outcomes 1, 2, 5 and 7 of the UNDP strategic plan, 2014-2017, and contribute collectively to outcome 4 on gender equality. UNDP will strengthen its design parameters, especially targeting, by improving disaggregated data collection and political economy analysis by region, gender, age and vulnerable groups. It will provide upstream policy advice coupled with the introduction of up-to-date innovative knowledge, ideas and practices, which can be practically integrated into local and national planning and implementation, and scaled up or replicated. The programmatic priorities have been collectively identified together with key national partners during the Partnership Framework for Development/country programme consultations.

17. UNDP will reposition its support to employment and economic diversification by realigning to Nurly Zhol, and establishing stronger linkages between local level implementation and national policies. It will provide targeted policy advisory support to promote employability and access to decent work for rural youth, persons with disabilities, and underemployed men and women. UNDP will continue scaling up the joint United Nations local development initiatives by promoting sustainable production technologies, and innovative approaches to vocational education and training services that better respond to labour market demands. In addition, UNDP will continue promoting overall economic diversification, and serve as a broker of knowledge and innovations by introducing new areas for SME development in non-extractive sectors (green energy/utility services, sustainable agriculture, eco-tourism and ‘green’ public infrastructure), and by linking potential investors to local producers and farmers.

18. Drawing on the experience accumulated through its energy and environment programme in the previous cycle, UNDP will establish a new portfolio on sustainable urbanization. This is a competitive niche area for which UNDP is well known in the country and, if successfully implemented, could serve as a template for effectively organizing UNDP work for other countries.5 It will consolidate the knowledge and pilots to date, and implement a more integrated approach to promoting sustainable and modern urban planning and management, including engaging non-governmental organizations (NGOs) and the private sector in promoting sustainable production and consumption patterns. New partnerships for integrating energy efficiency measures in key sectors of economy will be scaled up, and renewable energy solutions will be developed for the underserved and remote rural communities. UNDP will continue expanding its work in ecosystems and natural resources management and protection by introducing new models of payments for eco-systems services and sustainable livelihoods options around protected territories, for both women and men. UNDP will promote gender-sensitive disaster risk reduction interventions, prioritizing Southern Kazakhstan and other territories prone to natural and human-induced hazards. It will support the strengthening of environmental governance through capacity development of and coordination between relevant public institutions, the private sector and communities.

19. UNDP will realign its governance portfolio behind a singular purpose, government for people. It will give special focus to facilitating reform processes aimed at making public institutions more open, dynamic, flexible and less corrupt, such as streamlining business processes, functions and responsibilities of local and national government agencies. UNDP will promote broader policy changes in decentralization (fiscal and administrative), and participatory decision-making at local level. It will work with both duty-bearers (key

---

5 GEF projects’ mid-term (2010, 2013) and final evaluations (2013)
human rights and rule of law institutions, the judiciary and the Parliament), and rights-holders (represented by civil society, persons with disabilities, youth), in order to strengthen the capacities of human rights and rule of law institutions. UNDP will promote free legal aid and access to alternative dispute resolution mechanisms to victims of gender-based violence, persons with disabilities, and other vulnerable groups. UNDP will support public monitoring and oversight measures to improve transparency and participation, and will strengthen capacities of civil society organizations at local and national levels. UNDP will promote gender-responsive planning and budgeting at both national and local levels, and improve targeted service delivery corresponding to the specific needs of youth, women and men.

20. UNDP will scale up its international pillar through two strategic initiatives: KazAid, to support the establishment of Kazakhstan’s ODA system, and the Regional Hub for Civil Service in Astana. The Hub and other UNDP initiatives will promote empowerment of women working in civil service, through targeted policy and capacity development support. The Hub initiative will demonstrate scaling up to meet high demand and expectations both domestically and internationally, by delivering concrete results and innovations in research, knowledge management and capacity building. The Hub platform also presents an opportunity to strengthen practical South-South/East-East partnerships and collaborations, including a potential for additional resource mobilization. Strong linkages will be established with UNDP global centres and hubs and other similar entities in order to reach stronger synergies. UNDP will actively support transforming the KazAid concept into practice by providing policy advisory and technical support on ODA establishment and delivery. UNDP will actively support the Government in regional and global dialogues and initiatives on the SDGs, especially on those issues of shared concern such as sustainable management of natural resources, building inclusive societies and accountable institutions, and safe and resilient cities and human settlements.

III. Programme and risk management

21. This country programme document outlines UNDP contributions to national results and serves as the primary unit of accountability to the Executive Board for results alignment and resources assigned to the programme at country level. Accountabilities of managers at the country, regional and headquarter levels with respect to country programmes is prescribed in the organization’s programme and operations policies and procedures and the internal controls framework. Partnership Framework for Development reviews will ensure that the United Nations and UNDP support is implemented fully in line with nationally owned expectations.

22. National execution will be the default implementation modality, to be replaced by direct execution for all or part of the programme if required to enable response to force majeure. The harmonized approach to cash transfers arrangement will be used for initiatives that involve one or more United Nations organization, in order to fully utilize national systems. UNDP will periodically assess the capacities of implementing partners to effectively manage resources. Local and national partners will actively participate in the annual work planning, results monitoring and reporting processes to ensure transparent and accountable decision-making. UNDP will ensure that all programmes will apply a human rights-based approach and gender mainstreaming throughout this country programme cycle.

23. UNDP dependence on government cost-sharing, while a strategic choice for the country office, also presents a challenge. Concerted efforts will be taken to avoid the risk of substituting regular government functions. This requires internal oversight and consistent communication with partners by senior management. The ongoing economic crisis may become entrenched, thus challenging the country’s ability to allocate resources to UNDP presence and functioning as a net contributor country. UNDP will diversify its strategic partnerships by targeting the private sector, both domestic and transnational.
24. To demonstrate the principle of ‘fit for purpose’, UNDP will critically reassess its internal human resource capacities. It will introduce a flatter, leaner office structure, following global UNDP restructuring principles. It will provide strong coaching, mentoring and professional growth opportunities for all country office staff and project personnel to the extent possible, so that the profile of the credible, qualified office is maintained and strengthened. Projects and programmes will introduce a systematic review process to ensure that environmental and social safeguards, costs and benefits are evaluated in accordance with UNDP procedures.

IV. Monitoring and evaluation

25. UNDP will hold regular programme and project reviews to strengthen systemic monitoring. Each year, it will set strategic directions through its Strategic Advisory Board (chaired by the Deputy Prime Minister), and other partners. Based on the recommendations of external assessments conducted within the previous country programme cycle, it is necessary for the country office to strengthen its internal capacities to systematically collect relevant data, and analyze and utilize them effectively for intended results. At least 15 per cent of programme staff time will be dedicated to this purpose, while stronger collaboration will be established with national and local statistical offices. About 3 to 5 per cent of programme resources will be earmarked for systematic monitoring, evaluation and research.

26. UNDP will support the Government and civil society to produce cutting-edge research and data on the SDGs, both at national and local levels. This will entail promoting utilization of new tools of information gathering and analysis such as ‘open data’ collection, citizen reporting and others. UNDP will issue at least one national human development report dedicated to the post-2015 development agenda and the SDGs, and/or other topics of national interest and priority.

27. UNDP will extensively involve United Nations organizations as well as bilateral and multilateral partners to strengthen national monitoring and evaluation capacities. UNDP and implementing partners will conduct joint reviews of annual progress of programme and project implementation. Monitoring and evaluation quality control will be ensured through independent audits and evaluations, to be conducted in line with UNDP policies and procedures. UNDP and implementing partners will conduct at least one evaluation for each country programme/Partnership Framework for Development outcome during this programme cycle. It is expected that over 30 projects will be monitored and evaluated on a regular basis during 2016-2020.
Annex. Results and resources framework for Kazakhstan (2016-2020)

**NATIONAL PRIORITY OR GOAL:** Kazakhstan 2050: A diversified knowledge-based economy in which competitive entrepreneurs make effective and sustainable use of the country’s natural resources.

**UNDAF (OR EQUIVALENT) OUTCOME INVOLVING UNDP 1: Outcome 1.2:** Diversification of the economy provides decent work opportunities for the underemployed, youth, and socially vulnerable women and men.

**RELATED STRATEGIC PLAN OUTCOME: 1**
