High-level political forum on sustainable development
Convened under the auspices of the Economic and Social Council
New York, 8–12 and 15–17 July 2024
Item 2 of the provisional agenda*
Reinforcing the 2030 Agenda for Sustainable Development and eradicating poverty in times of multiple crises: the effective delivery of sustainable, resilient and innovative solutions

Report of the Regional Forum on Sustainable Development for the Economic Commission for Europe Region on its eighth session

Note by the Secretariat

The Secretariat hereby transmits, as input to the high-level political forum on sustainable development, the report of the Regional Forum on Sustainable Development for the Economic Commission for Europe Region on its eighth session, held on 13 and 14 March 2024.

* E/HLPF/2024/1.
Report of the Regional Forum on Sustainable Development for the Economic Commission for Europe Region on its eighth session

Co-Chairs’ summary of the discussions .......................................................... 9
I. Attendance

1. The eighth session of the Regional Forum on Sustainable Development for the Economic Commission for Europe Region was held as an in-person meeting at the Palais des Nations in Geneva on 13 and 14 March 2024. The session was co-chaired by the Deputy Minister for Foreign Affairs of Armenia, Vahan Kostanyan, and the Deputy Minister of Regional Development of Czechia, Radim Sršeň.

2. The session was attended by representatives of the following 48 States members of the Economic Commission for Europe (ECE): Albania, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Ireland, Israel, Italy, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Malta, Montenegro, Netherlands (Kingdom of the), North Macedonia, Poland, Portugal, Republic of Moldova, Romania, Russian Federation, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tajikistan, Türkiye, Turkmenistan, Ukraine, United Kingdom of Great Britain and Northern Ireland, United States of America and Uzbekistan.

3. The following non-member States of ECE attended: Cameroon, Panama and Uganda.

4. The European Union was represented by the delegation of the European Union to the United Nations and other international organizations in Geneva. The European Commission, the European Environment Agency, the European Union Agency for Fundamental Rights, the Digital for Development (D4D) Hub and the Joint Research Centre also participated.

---

1 References to Kosovo shall be understood to be in the context of Security Council resolution 1244 (1999).

7. Representatives of over 170 non-governmental organizations as well as representatives of youth, academia, the private sector and other organizations also participated. A complete list of participants can be found on the website of the regional forum (https://regionalforum.unece.org/events/regional-forum-2024).

II. Opening of the session and adoption of the agenda

8. The regional forum adopted the provisional agenda of the session, as contained in document ECE/RFSD/2024/1.

9. In their opening remarks, the Co-Chairs stressed the critical need for collective action towards implementation of the 2030 Agenda for Sustainable Development. Slow progress in achieving the Sustainable Development Goals had been compounded by recent challenges in the ECE region, including the coronavirus disease (COVID-19) pandemic, war with all its destructive impacts and the ensuing energy, food and cost-of-living crises. Those crises intersected with persistent longer-term issues, such as inequality, migration and environmental pressures, highlighting the urgent need for accelerated action. Notwithstanding those challenges, technological advances, youth engagement and growing climate awareness presented significant opportunities for a regional push towards the Goals. The forum aimed to foster discussions on generating momentum for accelerated progress towards the Goals, exploring policies, innovative solutions and partnerships necessary to overcome obstacles and leverage opportunities.

10. In her opening remarks, the Deputy Secretary-General stressed the complex challenges humanity faced. Underscoring the integral link between peace and sustainable development, she highlighted the headwinds to sustainable development efforts in the region, such as the COVID-19 pandemic, geopolitical tensions, including the Russian invasion of Ukraine, financial vulnerabilities and the triple planetary crisis. Despite those challenges, there was hope. The Political Declaration endorsed at the Sustainable Development Goals Summit signified a renewed commitment to accelerating the implementation of transformative policies and investments that were aligned with the 2030 Agenda. Promoting a Sustainable Development Goal stimulus of $500 billion annually to provide affordable, long-term finance for developing countries remained crucial. The stimulus proposal also called for a debt lifeline to give countries breathing space and for the expansion of contingency financing for countries in need. Key areas for action included inclusive and sustainable energy, food security, education and digital connectivity, with a need for collaborative initiatives and investment in infrastructure and climate adaptation. During all those important transitions, the presence of the United Nations in countries and regional capacities could help strengthen institutions, shape policy and regulatory frameworks, and harness investment pathways. The upcoming Summit of the Future represented an opportunity to create a more supportive global environment for peace, human rights and sustainable development.
11. The Executive Secretary of ECE delved into the region’s performance on the Sustainable Development Goals. Exacerbated by the war against Ukraine, the region’s multifaceted challenges were further affecting the already insufficient progress towards the targets of the Goals. The data situation was also not satisfactory, with data available to measure progress against only about 70 per cent of the targets in the region. Despite setbacks, the recent Sustainable Development Goals Summit and the upcoming Summit of the Future presented a unique opportunity for all stakeholders to accelerate progress. Highlighting the importance of cross-regional collaboration, she emphasized the need to leverage the unique opportunity presented by the holding of the twenty-ninth session of the Conference of the Parties to the United Nations Framework Convention on Climate Change in the region to address climate issues. She also stressed the significance of integrating the gender perspective in all sectors, especially in the light of the regional review that would take place prior to the 30-year review of the implementation of the Beijing Declaration and Platform for Action. Lastly, the speaker underscored the importance of action at the local level, referring in particular to the ECE Forum of Mayors.

12. The Director of the UNDP Regional Bureau for Europe and the Commonwealth of Independent States and Co-Vice-Chair of the Regional Collaborative Platform for Europe and Central Asia highlighted the urgency of reinforcing the 2030 Agenda in the midst of multiple crises. She outlined challenges faced by the region in addition to the war in Ukraine, including earthquakes in Türkiye and the refugee crisis in Armenia, all of which were exacerbating persisting environmental, social, economic and governance issues. She underscored the imperative to protect and advance development amid growing humanitarian needs. Partnerships played a critical role in achieving the targets of the Goals and there was a need for collaboration among member States, international organizations, civil society and the private sector. She highlighted the commitment of the Regional Collaborative Platform to supporting achievement of the Goals through strategic regional-level actions and policy support. In 2024, the Platform would focus on key transitions, including food systems transformation, energy transition, digitalization, climate change, education and the refugee crises.

III. High-level policy segment: “Reinforcing the 2030 Agenda for Sustainable Development in the Economic Commission for Europe region in times of multiple crises: the effective delivery of sustainable, resilient and innovative solutions”

13. The high-level policy segment provided an opportunity to take stock of progress on the Goals in the region through a presentation on the findings of the annual ECE progress report on the Goals.²

14. The following delegations took part in the ensuing high-level plenary debate: Albania (on behalf of the Central European Initiative countries), Armenia, Austria, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czechia, European Union, Germany, Hungary, Montenegro, Netherlands (Kingdom of the), Poland, Portugal, Republic of Moldova, Romania, Russian Federation, Slovenia, Spain, Switzerland, Turkmenistan, Ukraine, United Kingdom and United States. Representatives of civil society and youth reported on preparatory meetings and consultations. A representative of IOM reported on key messages from the second regional review of the Global Compact for Safe, Orderly and Regular Migration. A representative of the World Business Council for Sustainable Development also spoke, representing the business sector. The Russian Federation exercised its right of reply.

² The report is available at https://w3.unece.org/sdg2024/.
IV. Peer learning round tables

A. First set of round tables

Goal 1
Preparing social protection systems to respond to the poverty impacts of the climate crisis and green transitions

15. The lead organizer was the issue-based coalition on social protection, which is co-chaired by UNICEF, ILO, UNDP and WHO. The round table was moderated by the Director, UNRISD, Paul Ladd. Substantive inputs were presented by the following: Azerbaijan; Uzbekistan; children and youth major group; Global Coalition for Social Protection Floors; Regional Civil Society Engagement Mechanism; and United Nations in Albania Youth Advisory Group.

Goal 2
Healthy and sustainable diets: enhancing the sustainability of food systems in the face of climate change impacts

16. The lead organizer was the issue-based coalition on sustainable food systems, which is co-chaired by FAO, UNICEF and WHO. The round table was moderated by the Director, FAO Liaison Office in Geneva, Dominique Burgeon. Substantive inputs were presented by: Bulgaria; Finland; Germany; Tajikistan; Uzbekistan; Andriani SpA; Ankara University; children and youth major group; DMUN Foundation; Euro-Mediterranean Center on Climate Change; farmer from Spain; Planet-score; and Regional Civil Society Engagement Mechanism.

B. Second set of round tables

Goal 13
Solving the Rubik’s Cube of the planetary crisis: lining up policy solutions for climate risks and biodiversity loss

17. The lead organizer was the issue-based coalition on environment and climate change for Europe and Central Asia, which is co-chaired by ECE, UNEP and UNESCO. The round table was moderated by the following: Director, Environment Division, ECE, Marco Keiner; Director, UNEP Europe Office, Arnold Kreilhuber; and Director, UNESCO Regional Bureau for Science and Culture in Europe, Magdalena Landry. Substantive inputs were presented by: Germany; North Macedonia; Romania; Tajikistan; Centre for Social Welfare, city of Bihać; College of Environmental Science and Forestry, State University of New York; Department of Environmental Systems Science, Federal Institute of Technology Zurich; International Union for Conservation of Nature; European Environment and Health Process Partnership on Youth in the WHO European Region; Regional Civil Society Engagement Mechanism; Sava Youth Parliament; Soka Gakkai International; UNFCCC; WMO; and Youth Health Organization.

Goal 16
Accelerating policies, partnerships and innovation for just, peaceful and inclusive societies in the Economic Commission for Europe region

18. The lead organizer was UNDP. The round table was moderated by the Team Leader, Governance and Peacebuilding Team, UNDP Istanbul Regional Hub, Robert

3 Further information on the peer learning round tables is available at https://regionalforum.unece.org/events/round-tables-regional-forum-2024.
Bernardo. Substantive inputs were presented by: Czechia; Republic of Moldova; Switzerland; Congress of Local and Regional Authorities of the Council of Europe; International Development Law Organization; Lviv, European Youth Capital for 2025; Regional Civil Society Engagement Mechanism; and the Special Rapporteur on environmental defenders.

**Goal 17**

**Building effective partnerships for digital transformation**

19. The lead organizer was the United Nations Digital Transformation Group for Europe and Central Asia, which is co-chaired by ITU and ECE. The round table was moderated by the Regional Director, ITU Regional Office for Europe, Jaroslaw Ponder. Substantive inputs were presented by the following: Czechia; Estonia; Georgia; Poland; Romania; Spain; Commission on Science and Technology for Development; Council of Europe; Digital for Development (D4D) Hub; European Commission; OSCE; Capgemini; CERIT; City Institute for Public Health in Belgrade; Fundación ONCE; Halyk Bank Kyrgyzstan; International Research Centre on Artificial Intelligence; children and youth major group; Regional Civil Society Engagement Mechanism; Teenegerizer; Unconnected Foundation; Union of Operators of Armenia; and the “Promoting and measuring universal and meaningful connectivity” project (a partnership between ITU and the European Union).

**V. Plenary session: Advancing key transitions and cooperation towards achieving the Sustainable Development Goals in the Economic Commission for Europe region**

20. At the outset of the plenary session, the Co-Chairs introduced the key messages from the peer learning sessions.

22. The following delegations took the floor in response to the statement by the co-facilitators: Tajikistan, Latvia, United States, United Kingdom and Austria. Representatives of civil society, youth and the Black Sea Economic Cooperation Organization also spoke. The delegation of the Russian Federation exercised its right of reply.

23. The Co-Chairs then introduced the multi-stakeholder panel composed of the following speakers:

- State Counsellor to the Prime Minister of Romania, László Borbély (moderator);
- Co-Chair of the Independent Group of Scientists for the 2023 Global Sustainable Development Report, Co-President of the Heinrich Böll Foundation, Imme Scholz;
- Professor, Chair of Economics and Management of Innovation at the Swiss Federal Institute of Technology in Lausanne, Member of the Swiss Science Council, Dominique Foray;
- Board Member, Sustainable Finance Geneva, Special Adviser to the Board, Institutional Investors Group on Climate Change, Chief Investment Officer of the Geneva State Pension Fund, Grégoire Haenni;
• Chief Editor and Project Leader at TEENS.kg, Kyrgyzstan, on behalf of the Regional Civil Society Engagement Mechanism, Elina Turalyeva;

• Researcher and student of political science and international relations, Young European Ambassador of Bosnia and Herzegovina, on behalf of the children and youth major group European regional youth caucus, Layla Jusko.

24. The Assistant Secretary-General for Youth Affairs and a representative of the Global Cities Hub took the floor as discussants. The following delegations took part in the ensuing plenary debate: France and Switzerland. Representatives of civil society, youth, the Eurasian Development Bank and the Parliamentary Assembly of the Mediterranean also spoke.

25. A summary of the discussions in the plenaries and peer learning sessions is contained in the annex to the present report. Written statements are available on the website of the regional forum (https://regionalforum.unece.org/event/regional-forum-2024).

VI. Closing

26. In her closing remarks, the Director-General of the United Nations Office at Geneva highlighted the dynamic and diverse nature of the ECE region. While it had been a leader in economic development and integration, it faced significant challenges, including conflicts and lagging progress towards achievement of the Sustainable Development Goals. Multi-stakeholder engagement, particularly involving civil society and youth, was underscored as crucial for effective implementation. Key areas for accelerated action included energy, education, climate and digitalization. The role of “International Geneva”, particularly through initiatives such as the SDG Lab, was highlighted in promoting long-term sustainability and achieving the Goals.

27. The Executive Secretary of ECE underscored the importance of the regional forum for renewing commitment to accelerating the implementation of the Sustainable Development Goals and for introducing new ideas and concrete proposals. Stakeholder engagement was emphasized, including that of Governments, United Nations entities, civil society and youth groups. She expressed her gratitude to those that had helped with the preparations for the forum, particularly the secretariat organizing team, the regional United Nation system entities and the member States that had provided financial support: Germany and Switzerland.

28. Before closing the meeting, the Co-Chairs thanked the organizers and participants and explained that the draft report of the regional forum, including the Co-Chairs’ summary of the discussions, would be circulated for comments by participants. The final version would constitute the official input from the ECE region to the 2024 high-level political forum convened under the auspices of the Economic and Social Council.
Annex

Co-Chairs’ summary of the discussions

High-level policy segment on the theme “Reinforcing the 2030 Agenda for Sustainable Development in the Economic Commission for Europe region in times of multiple crises: the effective delivery of sustainable, resilient and innovative solutions”

1. Strong headwinds have been impairing advances in the achievement of the Sustainable Development Goals in recent years, including the lingering effects of the coronavirus disease (COVID-19) pandemic, existing food, financing and energy vulnerabilities, gross violations of human rights, a humanitarian and refugee crisis, the triple planetary crisis, the war against Ukraine and the escalation of other conflicts in the Economic Commission for Europe (ECE) region. In 2024, the progress report prepared by ECE continued to show a worsening performance. The region will achieve only 20 targets by 2030, or just 17 per cent of measurable targets, down from 21 targets that were assessed as being on track last year and 26 targets two years ago. For 80 targets, progress should be accelerated. The number of targets in which the region is going backwards has increased to 17, from 15 last year.

2. Data availability is improving, with the number of global indicators that cannot be assessed declining from 77 to 71. In addition, most countries in the region have developed national indicators and reporting platforms to measure progress, which, although they cannot be used for international comparisons, provide critical information for implementation.

3. Taking an in-depth look at the Sustainable Development Goals, the picture that emerges is concerning. While the region has experienced a reduction in extreme poverty and is on track to meet this target, all other targets of Goal 1, including social protection, require accelerated progress. None of the targets relating to hunger and food security (Goal 2) are on track. Significant challenges persist regarding climate action (Goal 13). Only two targets can currently be measured, which show that greenhouse gas emissions are increasing and that resilience to disasters needs to improve, amid more frequent climate shocks and natural disasters. Current trends indicate that no target will be achieved by 2030 on Goal 16, which focuses on peace and justice, while the region is regressing on human trafficking and effective institutions. Progress on Goal 17, on strengthening the means of implementation and revitalizing the Global Partnership for Sustainable Development, remains insufficient in practically all areas, with the exception of science cooperation and capacity-building for information and communications technology.

4. The Sustainable Development Goals Summit held in September 2023 resulted in a renewed commitment to accelerate progress on policies and investments that can drive transformative change in relation to all the Goals and finally deliver on the promise of the 2030 Agenda for Sustainable Development. The Summit of the Future that will take place in September 2024 offers a new opportunity to strengthen multilateral cooperation in support of sustainable development. While there are serious challenges, there is also a unique opportunity to be seized, as advances in knowledge and technology, if properly managed, could deliver a better future for all. Strong and sustained international cooperation is essential in this regard.

5. The recent episodes of high energy prices have created serious social problems in many countries in the region and tested social safety nets. Countries are committed to advance decarbonization efforts, but measures are needed to bring about a just transition and protect the population from negative effects. By way of illustration, a
needs-based energy subsidy programme mitigated poverty impacts in the Republic of Moldova, and in Slovenia, the definition of energy poverty was the basis for an action plan and the identification of corrective measures.

6. Multiple shocks have negatively affected food security in recent years. Investing in resilient infrastructure is important to mitigate the negative consequences of these shocks. Bioeconomy development and the use of residual material and waste can offer solutions to existing challenges, as explored in Bulgaria. Holistic solutions that take into account the multiple dimensions of the problem are necessary.

7. Developing effective, accountable and transparent institutions, while ensuring responsive and inclusive participatory and representative decision-making at all levels would have a positive impact for many of the Goals. For instance, Poland is focusing on enhancing the effectiveness of institutions for growth and social and economic inclusion. The United States of America is providing funding to tap into the possibilities of artificial intelligence to accelerate the attainment of the Goals.

8. Institutional changes are contributing to the effectiveness and coherence of government actions. In Slovenia, for example, a new ministry merges responsibility for climate and environment with that for energy and transport policy. In the Kingdom of the Netherlands, trade and development are seen as intrinsically linked and therefore fall under the responsibility of a single ministry. In Czechia, new legal forms of municipal partnerships are being promoted to support the coherence of sustainable development policies. The ambitious reform agenda of Armenia, which is aligned with the Goals, contributed to double-digit economic growth and a strong economic outlook, making it possible to address the short-term needs of more than 108,000 forcibly displaced refugees from Nagorno-Karabakh in 2023.

9. Education and human capital development will be critical in the efforts to achieve the Goals. In Cyprus, a holistic national strategy on education and the green transition is being developed that is reflected in teaching programmes and considers school buildings as learning communities. Romania is committed to enhance public sector capabilities and is steadily increasing the number of experts in sustainable development. Croatia also emphasized education and culture change as a transformational tool. Spain, which together with the Republic of Moldova, co-chaired the regional Conference on the 30-year review of the implementation of the Programme of Action of the International Conference on Population and Development, entitled “Population and Development: Ensuring Rights and Choices” (Geneva, 19 and 20 October 2023), stressed that a common notion that had emerged in that Conference was that building human capital was essential for addressing demographic change.

10. Armenia mentioned that equitable and inclusive connectivity, open borders and fully functioning transport infrastructure were important drivers of economic prosperity and sustainable development, in particular for landlocked countries. Armenia is advocating the Crossroads of Peace Initiative as a means of creating conditions that will unlock the region’s significant potential. Turkmenistan is proposing the creation of a global atlas of sustainable transport connectivity that, on the basis of a multi-stakeholder partnership, would provide analysis and solutions. The Kingdom of the Netherlands also stressed the importance of enhancing transport options to facilitate trade.

11. Global, regional, national and local partnerships for sustainable development that engage all relevant stakeholders, including civil society, the private sector, academia and youth, are critical. A whole-of-society approach needs to complement a whole-of-government approach. This requires investment in the development of an efficient institutional framework. In Germany, the forthcoming update of the national sustainable development strategy will involve extensive stakeholder consultations.
12. Local action is key to achieving the Goals, as more than half of the world’s population lives in cities and most targets of the Goals cannot be reached without the engagement of local and regional governments, as underlined by Czechia. Public administration reforms and decentralization processes undertaken in many countries in recent years have enabled the implementation of community-based approaches and the diversification of local actions. Integrated and participatory place-based approaches have proven to be a very effective way of achieving sustainable development, respecting the specific needs of each place.

13. Initiatives and organizations that support knowledge transfer and collective action can play a valuable role in advancing the Goals. The role of ECE, as a platform for regional dialogue, peer learning and exchange of experiences, with strong competencies in many different areas, was stressed by many participants. At the subregional level, the Central European Initiative has a large range of funding opportunities, programmes and instruments that promote the Goals, including through partnerships with other entities.

14. Voluntary national reviews contribute to advancing the attainment of the Goals, by taking stock of existing progress, bringing together various stakeholders for their preparation and prompting follow-up actions. In Portugal, after its second voluntary national review in 2023, a 2030 national road map for sustainable development is being designed, incorporating a strategic framework aimed at policy coherence. Austria is preparing a second review, which is placing special emphasis on building partnerships with a wide range of actors and closing statistical gaps.

15. Transformational change requires appropriate financing. In many countries, budgetary allocations for the green transition have increased and new financial instruments have been put in place, including in the context of regional policies. In Bosnia and Herzegovina, a working group on financing the Sustainable Development Goals comprising a wide range of experts has issued recommendations for increasing financial flows for implementation of the 2030 Agenda.

16. Beyond domestic initiatives, the international dimension of financing, regarding both private and public resources, is critical. Reform of the global financial architecture is essential to facilitate access to finance. The United Kingdom of Great Britain and Northern Ireland is leveraging its position as a leading financial centre to remove barriers to investment, including by promoting the reform of multilateral development banks and eliminating barriers to private sector investment. Through various initiatives, the European Union is channelling resources to address environmental and social issues in other parts of the world. Portugal, as a creditor country, has concluded debt swaps for climate agreements with two partner countries to support the conversion of sovereign debt into climate-related investments.

17. Reliable, comparable and up-to-date data is vital in order to develop effective strategies for advancing the Goals on the basis of well-founded decisions. Data and statistics allow us to assess progress, identify shortcomings and gaps and anticipate the future. Switzerland has bolstered the capacity of its national statistical office to improve the availability of quality data. Montenegro is identifying priorities for the development and improvement of relevant indicators.

18. Civil society emphasized the urgent need for action, with only six years left to implement the 2030 Agenda. The consequences of the climate crisis, armed conflicts and economic disparities are dire. Structural economic systemic change is imperative to live within planetary boundaries. There is a need to value care work, develop green jobs and end reliance on fossil fuels. Fundamental freedoms need to be protected and corporations should be accountable for negative externalities. A just transition requires transparent stakeholder engagement, action on gender inequality and equitable funding distribution. Despite the challenges, progress is possible, by
drawing on solidarity and cooperation. The opportunities offered by the Summit of the Future should not be missed.

19. The children and youth major group emphasized the significance of the 2030 Agenda for all communities, in particular the most vulnerable and marginalized groups, and stressed the need for economic, environmental and intergenerational justice. There is a need for public investments in education to tackle poverty, reform of the global financial architecture and the strengthening of social protection floors. In addressing hunger, just trade practices and awareness campaigns regarding food waste are important. Food supplies should reach areas affected by conflict without restriction. Climate justice, youth involvement in governance and ecosystem protection should inform and accelerate climate actions. Fossil fuels should be phased out. Freedom of speech and peaceful protest should be protected, and Governments should resolve ongoing conflicts. Transparent governance, inclusive policymaking and access to resources for youth and civil society are the foundation of effective partnerships. Achieving the Goals requires peace, justice and the protection of human rights defenders.

20. Given the urgency of addressing climate change and achieving the goals of the Paris Agreement, cooperation between Governments and the private sector is critical. The World Business Council for Sustainable Development seeks to mobilize businesses for collective action, with a particular focus on climate, nature and equity agendas across global value chains. The upcoming Summit of the Future presents an opportunity to step up collaboration between business and Governments.

21. The second regional review of the Global Compact for Safe, Orderly and Regular Migration in the ECE region, held back-to-back with the regional forum, highlighted the significance of migration, with over half of the world’s international migrants residing in this region. Despite extensive progress towards the Compact’s objectives, challenges such as risks to vulnerable populations, loss of life during migration and violations of migrant rights persist. Concrete actions discussed included meeting labour-market needs, facilitating safe migration pathways, ensuring ethical recruitment and addressing root causes such as poverty, conflict and climate change. Concerns were raised about rising anti-migrant sentiments and the need to combat discrimination. Stakeholders emphasized the importance of collecting data and debunking misleading narratives.

22. Various delegations mentioned that the war against Ukraine was having devastating consequences for the ECE region and globally. Ukraine denounced Russia’s illegal and unprovoked aggression and the continued violation of international law, while drawing attention to the negative consequences of the war for implementation of the Sustainable Development Goals. The European Union, on behalf of its member States, reiterated the strong condemnation of Russia’s illegal, unprovoked and unjustified actions against Ukraine. Austria stated that the war was not only an aggression on a sovereign country but an attack on common aspirations and values. Czechia emphasized that Russia’s war of aggression against Ukraine also posed a range of potentially catastrophic and existential threats to humanity. Germany and Poland stressed that there could be no sustainable development without peace and security and reiterated their support for Ukraine and international law. The Kingdom of the Netherlands and the United Kingdom urged the Russian Federation to end its illegal invasion of Ukraine. The Russian Federation rejected all accusations and stated that sanctions introduced by Western countries undermined the achievement of the Goals. Belarus emphasized the negative consequences of sanctions for sustainable development and that the shrinking space for cooperation was leading to missed opportunities. Hungary stressed the need to avoid the politicization of technical organizations and the fragmentation of international cooperation in the region.
Outcomes of the peer learning round tables

A. First set of round tables

Goal 1
Preparing social protection systems to respond to the poverty impacts of the climate crisis and green transitions

23. In the European and Central Asian region, the climate crisis, in addition to a number of other drivers such as inequality and limited access to quality social services, is contributing to an increase in the incidence and severity of poverty, with unequal impacts on women and girls and vulnerable populations. Multiple crises, such as displacement, natural disasters, conflict and rising food and energy prices, are threatening progress towards Sustainable Development Goal 1 and the global development agenda more broadly.

24. Sustained commitment to social protection linked to wider employment, skillling, reskilling and other development programmes is already contributing to poverty reduction. Integrated approaches such as the Global Accelerator on Jobs and Social Protection for Just Transitions and other high-impact initiatives can drive policy changes to address green, digital and social transitions. Context-specific, well-designed, human rights-based and participatory social protection plays a key role in responding to shocks, including those resulting from climate change and especially in the context of demographic shifts, including climate-driven migration.

25. Economic, social and health inequalities between rural and urban areas will be exacerbated by the climate crisis. Rural areas face critical challenges in the context of rapid urbanization. These include gaps in digital connectivity as well as limited infrastructure and services compared with cities, ageing populations, a shrinking workforce and the outward migration of young people. This context drives other challenges, including health and livelihood insecurity, a shrinking tax base, limited opportunities for education, strain on the capacity for delivery of public services, and potential loss of trust in institutions. In cities, challenges such as growing inequality, living costs, urban sprawl and air pollution continue to affect household well-being, with a disproportionate impact on populations that are already disadvantaged.

26. Social protection systems could mitigate impacts and provide families and communities with increased capacity to cope or adjust. In some countries, efforts are under way to make social protection systems and programmes shock-responsive, recognizing different types of risks and the need to adapt to specific local contexts and needs. Key emerging themes include the need for coordinated planning to mitigate risks; for disaster preparedness and management; and to prioritize and include the most vulnerable communities in the design of social protection systems and programmes. Non-governmental institutions play a very important role in these processes, especially in the involvement of socially segregated groups.

27. Digital, transparent systems and robust information and accountability mechanisms are necessary to ensure the effective delivery of social protection services, including to combat corruption. There is a need to generate evidence and data to inform shock-responsive social protection strategies, engage young people in decision-making processes, provide accessible methods for marginalized populations to participate, and adapt programmes to meet evolving needs.

28. Financing remains a challenge in a context where urgent needs are present. New multi-stakeholder alliances are advancing options for the financing and design of social protection. Useful lessons can be derived from the response to the COVID-19 pandemic, during which government budgets and international financing were
leverage to fund a rapid expansion of social protection benefits. Financing social protection ultimately requires domestic resource mobilization and progressive fiscal policies. In countries with fewer capacities and resources, global mechanisms can also provide resources.

29. Ensuring universal access to social protection floors and keeping social protection high on the agenda demands political will. Social protection is an investment in resilient economies and healthy, cohesive societies as well as in human capital. Equity-proofing requires an assessment of multiple dimensions of inequality using data disaggregated by, inter alia, age, gender, disability, ethnicity and migrant status, while adapting to changing situations and shocks.

30. There is a strong link between social protection systems, national care systems and informal care. While ageing societies can strain social protection and care systems, older persons are also instrumental in providing care. Potential solutions include support for carers or childcare and the empowerment of women and girls financially. Care work should be recognized.

31. Universal access to social protection should be ensured, but targeted measures to support particular groups may also be necessary. However, targeted benefits also carry risks, including the cost of identifying and keeping track of those in need, stigmatization and possible exclusion and/or discrimination if not well-designed. Issues such as identification costs, scalability, comprehensiveness, inclusiveness and rights-based approaches need to be considered to ensure systems and programmes can respond effectively to shocks. Future demographic shifts and diverse needs should be taken into account.

32. Effective national green transition strategies should deliver on economic and social objectives while also responding to digital transitions and job losses in some sectors. They should consider investment in green jobs, a greater focus on green skills, lifelong learning and reskilling, and the formalization of work.

33. Social protection should be integrated into climate adaptation and mitigation strategies, leveraging international cooperation and prioritizing inclusive policies. As a result of the climate crisis, mass displacement is likely to increase in the next 50 years. Questions of legal identity and entitlement to social protection are becoming important. Cooperation, both cross-border and regional, on schemes that people are likely to need will be necessary, in particular concerning the issue of residency-based social protection systems and cross-border climate-induced vulnerabilities. International cooperation on climate financing remains vital, including the impacts of future climate risks on debt sustainability. Further action is needed on ways that climate finance mechanisms can support or augment existing social protection systems.

34. Shock- and equity-proofed social protection systems and green transitions must be aligned with national characteristics. A focus on families and individuals should be complemented by attention to area-based transitions and social protection with, for example, a focus on community resilience. The disproportionate impact of disasters on remote and rural communities, especially on children, young people, women, persons with disabilities and marginalized groups, means that geographical and age dimensions need to be incorporated into policy design. Accessible social services, especially in rural areas, are important. Disaggregated and granular data is necessary to effectively address the specific needs of vulnerable populations.
Goal 2
Healthy and sustainable diets: enhancing the sustainability of food systems in the face of climate change impacts

35. The ECE region is not on track to achieve hunger and food security targets. The ECE progress report and the report Europe and Central Asia: Regional Overview of Food Security and Nutrition 2023 – Statistics and trends indicate that access to sufficient and nutritious food is not universal in the region. In one third of the countries, more than 10 per cent of all adults experience food insecurity. Although the prevalence of undernourishment in the region is below 2.5 per cent, more than 110 million people are still moderately or severely food insecure. Other nutritional challenges include anaemia among women, the prevalence of overweight among children under 5 years of age and rising rates of adult obesity.

36. There is an urgent need for sustainable food production on a global scale. The nexus of food systems and climate change emerges as pivotal. Food systems are highly vulnerable to climate change impacts while also contributing 23 per cent to annual greenhouse gas emissions. Food systems must be part of the climate solution in terms of mitigation and adaptation to ensure food security for all.

37. Climate action and the transformation of food systems are crucial to feed the growing global population sustainably while preserving the climate, biodiversity and rural communities’ livelihoods. Sustainable agricultural and livestock practices, such as agroecology, organic farming and climate-smart and regenerative agriculture, offer solutions in relation to climate change, biodiversity loss, carbon sequestration and the improvement of nutritional status. Rewetting peatlands is crucial in the region to protect the climate and biodiversity. Reducing food loss and waste is critical for saving valuable resources and reducing emissions. Setting ambitious national targets in support of sustainable practices and implementing inclusive and impactful joint actions are crucial.

38. The increasing demand for higher quality food and agricultural products, coupled with challenging market conditions, is placing farmers under significant economic strain. The agriculture sector is under pressure to contribute to climate neutrality without compromising competitiveness or food security. As farmers respond to market demand and incentive structures, policies need to be tailored to stimulate demand for healthier and more sustainable food. It is key to provide sufficient compensation to farmers to overcome losses due to factors such as weather events and disease outbreaks, to demonstrate the benefits of the green transition and to foster education, capacity development and green investments to support farmers in adapting to a changing climate.

39. Innovative solutions and state-of-the-art technologies are essential for transforming food systems, including plant-based alternatives and health-focused approaches. In line with the One Health approach, prudent use of antimicrobials is essential for global health and food safety. Strategies were mentioned that would make healthier options more affordable and accessible, such as zero customs duties on nutritious foods. The private sector also plays a key role in improving the food environment and in pioneering the implementation of innovative initiatives that can promote sustainable and healthy diets.

40. Civil society stressed the need to recognize and implement access to food and nutrition as a human right, to address the root causes of hunger and malnutrition and to adopt effective and inclusive policies. Shifting from a narrative of food security to one of food justice, based on research and data, and adopting an intersectionality approach were also suggested.
41. The European Union and the Governments in the region can influence markets to produce quality, safe food in a more environmentally friendly way. Multi-stakeholder and participatory policy processes, with the involvement of smallholder farmers, young people, women and marginalized groups, as well as the private sector and academia, are key for creating sustainable food systems. Multilateral mechanisms and processes, such as the Committee on World Food Security, the twenty-ninth session of the Conference of the Parties to the United Nations Framework Convention on Climate Change and the follow-up to the United Nations Food Systems Summit, are key instruments in this context. Food systems national convenors also play a vital role in mobilizing stakeholder engagement, thereby increasing policy coherence for sustainable food systems.

42. Obesity and unhealthy diets have emerged as significant contributors to mortality rates. More coordinated action between the health and agrifood sectors is required to address the growing number of diet-related non-communicable diseases, by providing an enabling food environment in which sustainable healthy diets are more available and affordable. To ensure a healthy diet for all, continuous efforts must be made by food companies and food safety authorities to ensure the quality and safety of food. The ability of consumers to make healthy food choices is informed by the “food environment”, in which food labelling, advertising, retail structure and markets are all influencing factors.

43. There is a need for stricter regulations on food marketing, especially advertising to children. Transparent environmental impact and nutritional food labelling was highlighted as a tool to inform consumers about the environmental impact of food products and their nutritional value. The importance of education campaigns was also acknowledged as a means to raise awareness of the benefits of consuming organic, seasonal and locally produced foods. Economic incentives, such as tax benefits for sustainable and organic food producers, were also proposed as a means to promote healthier options and discourage the consumption of foods with a high environmental footprint. Understanding the true cost of food can help provide guidance in this regard.

44. School meal programmes are key instruments to promote food education, health and sustainability. By utilizing public procurement for school meals, Governments can support local agriculture, promote healthy eating habits among students and ensure that meals meet nutritional guidelines. Acknowledging school catering as an investment is crucial. Aligning school meals with national nutrition and hygiene standards and considering student preferences can address challenges such as healthy food acceptance, adequate nutrition in meals, food accessibility and equity. Introducing vegetarian meal choices is a strategy to combat the low intake of fruits and vegetables among students.

45. Processed foods in categories known to contribute significantly to the intake of fats, sugar and salt in the population should be monitored, with a focus on promoting a continuous improvement in their nutritional content.

B. Second set of round tables

Goal 13
Solving the Rubik’s Cube of the planetary crisis: lining up policy solutions for climate risks and biodiversity loss

46. Climate change causes widespread and rapid changes in the atmosphere, ocean, cryosphere and biosphere that threaten to reverse the progress made towards achieving the Sustainable Development Goals.
47. The year 2023 is set to be the warmest on record globally, with worrying trends continuing for other climate indicators too, such as ocean heat content, global mean sea level, Antarctic sea-ice extent and glacier ice mass. The State of the Climate in Europe 2022 report explains that Europe has been warming at twice the global rate since the 1980s, with far-reaching impacts on the region’s socioeconomic fabric and ecosystems.

48. Extreme weather and climate-related events such as floods, heat- and cold-waves, heavy precipitation and droughts affect every aspect of society, including the rights to life, health, housing and access to water and sanitation. In 2022, these hazardous events resulted in approximately 16,000 reported fatalities and directly affected 156,000 people in Europe.

49. Targeted and coordinated support is required, particularly for high-risk countries, to address their urgent need for effective multi-hazard early warning systems. The Early Warnings for All initiative was launched by the Secretary-General in 2022 with the aim of ensuring that everyone is protected from hazardous weather, water or climate events through life-saving early warning systems by the end of 2027.

50. In Europe and Central Asia, significant gaps remain in the implementation of effective early warning systems that are risk-sensitive, target communities most at risk, effectively disseminate messages and warnings, ensure preparedness and support early action. In Tajikistan, weather-related disasters have caused enormous socioeconomic and environmental damage, which in turn hinders the country’s sustainable development. The country is therefore taking action to implement the Early Warnings for All initiative nationally and is calling for the active and broad participation of the international community under the initiative. As the first pilot country in the region, Tajikistan has pledged its efforts for the successful implementation of the initiative and will be ready to share its experience.

51. Effective climate risk reduction policies at the national level involve both the establishment of an early warning system and the integration of climate adaptation and disaster risk management in all sectors. Execution of the Early Warnings for All initiative at the national level, and other policies and actions addressing climate risks, must be based on collaboration between actors at the local, national and transboundary levels.

52. Climate risks including extreme weather events have long-lasting socioeconomic impacts. They also exacerbate inequality because the most vulnerable communities are often the least equipped to respond, recover and adapt. It is therefore imperative to focus on the heightened impacts on these communities. Children, persons living with disabilities, women and families living in poverty must have access to climate-informed social services. Furthermore, shock-responsive social protection plays a vital role in shielding the most vulnerable.

53. Policies and actions addressing climate risks should encompass all ages, including young people. Supporting young people through education, green skills development, mentoring schemes and meaningful engagement in all national, regional and international climate change negotiations and decisions is instrumental. This will provide adolescents and young people with the opportunity to influence climate change adaptation and disaster risk reduction policies.

54. The interconnectedness of climate change and biodiversity loss is critical and neither of these challenges can be successfully resolved unless tackled together. As highlighted by the outcome of the global stocktake at the twenty-eighth session of the Conference of the Parties to the United Nations Framework Convention on Climate Change, these two crises need to be addressed in a comprehensive and synergetic manner if the Sustainable Development Goals are to be achieved. To succeed,
countries need to develop holistic policies based on science, inclusion and consensus and to communicate effectively on the role of nature.

55. Research on the role of soil and vegetation in the carbon cycle and climate system strengthens our understanding of climate change and biodiversity loss. Advanced information-gathering tools and state-of-the-art computer models, drawing from diverse data sources, give insights into the links between nature, climate change and human activity, well-being and rights. Current scientific knowledge supports advocacy for the protection and restoration of ecosystems, which are critical to food production, the economy and human health.

56. Based on the scientific evidence and success stories, consensus on joint action can be built among stakeholders, as well as within academia. This can lead to collaboration between communities, academia and the private sector on shared, sustainable and evidence-based policy solutions.

57. Strategies for addressing the interlinked challenges of climate change and biodiversity conservation, as well as land degradation, include integrated planning, policy and budgeting frameworks. National-level alignment is needed when developing key instruments such as nationally determined contributions and national biodiversity strategies and action plans in support of the Paris Agreement and the Kunming-Montreal Global Biodiversity Framework, respectively, as well as land-degradation neutrality targets. In practical terms, this means bringing together at the national level the focal points for the United Nations Framework Convention on Climate Change, the Convention on Biological Diversity and the United Nations Convention to Combat Desertification in Those Countries Experiencing Serious Drought and/or Desertification, Particularly in Africa. Enhancing synergies between these three conventions could lead to common and concrete rights-based national commitments on sustainable land management, ecosystem restoration and other nature-based solutions for climate adaptation and mitigation strategies.

58. Transparency, accountability and inclusive decision-making are essential for successful climate and biodiversity policies and financing. Refocusing investment and redirecting financing such as agriculture subsidies can turn the policies into practice. Capacity-building initiatives are recommended to empower Governments, financial institutions and civil society organizations in designing and implementing climate and biodiversity financing projects.

59. Participatory approaches foster the ownership and co-production of knowledge and policy solutions grounded in social justice and human rights. Inclusion of children, young people, women and minorities needs to be supported by establishing new – or tapping into existing – participatory mechanisms at the national and subnational levels to ensure the meaningful participation of stakeholders in decision-making processes. Grants focused on the meaningful engagement of minorities in academia and decision-making are needed. Increased investment in education on climate resilience and biodiversity action, including funding for schools, teacher training and peer-to-peer learning, is fundamental.

**Goal 16**

**Accelerating policies, partnerships and innovation for just, peaceful and inclusive societies in the Economic Commission for Europe region**

60. The ECE region faces unprecedented challenges, with escalating crises impeding the achievement of Sustainable Development Goal 16. Earlier progress was lost during the COVID-19 pandemic, while armed conflicts, the spread of disinformation, systematic corruption and widening inequalities threaten to derail progress. Declining trust in public and formal justice institutions is fuelled by democratic backsliding. Civil society organizations, media professionals and rights
defenders are under threat for their work on defending media freedom, human rights and the environment, the protection of displaced populations, arms control and access to justice. The fact that all the targets of Goal 16 are off track demands a renewed policy focus and bold action.

61. The 2024 “super election year”, with major elections in approximately 60 countries worldwide, underscores the vulnerabilities of democratic processes. There are serious policy concerns regarding election-related misinformation, the need for agile communication to respond to false news and misinformation, the imperative of digital transformation in public services, and the pivotal roles of transparency and universal access to justice in fostering social cohesion. The escalating conflicts and aggression throughout the ECE region are taking a particular toll on children and young people, both physically and psychologically.

62. Policy frameworks that encourage collaboration and leverage innovation to mitigate the impacts of various intertwined crises have a transformative power. As a response to ongoing difficulties, the Republic of Moldova developed a data-driven programme designed to alleviate energy poverty, targeting those most in need and strengthening the rule of law and transparency. Policy successes demonstrate the importance of multi-stakeholder partnerships, data, evidence-based policymaking and the strategic, inclusive use of technology.

63. Inclusive digitalization is central to achieving equitable progress, with access to justice for all recognized as a critical enabler of public participation and the realization of all the Goals. Policies that facilitate and regulate the development and deployment of digital tools and platforms can enhance public service delivery, improve transparency and broaden access to justice. Improved digital literacy is an important precondition for achieving the Goals.

64. Special attention must be paid to bridging digital divides and ensuring that technological solutions are accessible and empowering to all. Examples include digital solutions to support anti-corruption efforts and to increase transparency. In particular, grievances can be addressed in an open way through electronic recording and audiovisual transcripts of court proceedings, electronic case filing and frameworks for electronic public registers.

65. Prioritizing accessible, inclusive and gender-sensitive justice systems, with a focus on informal and customary mechanisms, is crucial to reach the most marginalized and ensure that no one is left behind. Eliminating discriminatory laws, empowering women in the justice sector and addressing gender-based violence are prerequisites for peace, sustainable development and the attainment of Goal 16, particularly in conflict and crisis contexts.

66. Empowering local and regional governance is essential. Policies should strengthen the meaningful and effective participation of all segments of society, placing particular emphasis on women, youth and vulnerable communities. Decentralization, supported by effective, meaningful and inclusive participatory mechanisms, enables citizen-centric policymaking. This boosts public trust and enhances the responsiveness and efficacy of the Government in addressing people’s immediate needs, achieving the Goals and promoting human rights and democratic values.

67. There is a need to design and institutionalize effective and meaningful public participatory mechanisms at all levels of governance in order to foster community ownership of programmes and decision-making processes. Civic education focused on democratic principles, critical thinking and active citizenship, especially among young people, should be encouraged.
68. Examples of initiatives addressing these issues include the citizen assembly in Mostar, Bosnia and Herzegovina, and the youth well-being index in the municipality of Lviv, Ukraine. The index evaluates conditions for youth and actively engages them in devising solutions. It is used to shape evidence-based youth strategies and networks of youth centres to support youth-led programmes that address diverse needs.

69. Cross-sectoral partnerships and open communication between local and national governments are crucial for the coordinated and effective implementation of policies on the Sustainable Development Goals.

70. Robust data infrastructure is fundamental for effective policy design, implementation and evaluation. Supporting data collection and analysis, particularly data disaggregated by key factors such as gender, location and income, is crucial to identify inequalities and ensure targeted interventions that leave no one behind.

71. Bridging the digital divide and enhancing access to information to ensure no one is left behind should be another policy priority. This can include coupling online services with offline access points through a network of support offices in remote communities to provide guidance in using digital systems.

72. Upholding the rule of law, combating corruption and building transparent, accountable institutions should be a core concern. To that end, strengthening judicial systems and judicial cooperation, safeguarding the independence of oversight bodies and ensuring equitable law enforcement are important measures to safeguard sustainable development.

73. Policies that protect environmental and human rights defenders from harassment, intimidation and violence should be enacted and enforced. Mechanisms should be created, in consultation with rights defenders, for prompt reporting and investigation of threats, while ensuring access to legal recourse and robust support networks.

74. There is an urgent need to prioritize the achievement of Goal 16 through coordinated action by Governments, civil society, the private sector and international organizations. The challenges facing the ECE region require effective law enforcement and bold policy frameworks backed by political will, resource allocation and a steadfast commitment to inclusivity and partnership. Given the cross-cutting implications of Goal 16, advances in this area will be closely linked to progress on all the other Goals. Synergies with target 17.14 (enhance policy coherence for sustainable development) are important to prioritize Goal 16 achievement.

**Goal 17**

Building effective partnerships for digital transformation

75. Digital technologies and services are critical drivers of sustainable development. The forthcoming Summit of the Future, the anticipated global digital compact and the 20-year review of the World Summit on the Information Society show that they are a central policy concern.

76. Digital transformation offers significant promise for meeting the targets of the Sustainable Development Goals and advancing the implementation of the action lines identified by the World Summit on the Information Society. However, despite continued efforts, several digital divides still exist and, with the high innovation dynamics of information and communications technologies (ICTs), new ones are constantly emerging.

77. Closing the digital gap by equipping everyone with the digital skills they need is a moral imperative. It will also have positive benefits for economic growth and innovation. Individuals without basic digital skills are at risk of being left behind in
an increasingly digital society. The provision of basic digital skills, among both the young and the old, and access to affordable tools are essential. Actions to bridge this gap and advance gender inclusion should be core policy aspirations. Women’s employment in digital activities is constrained by access limitations and insufficient skills, especially in rural areas.

78. The private sector can contribute to initiatives that empower and support underprivileged youth and communities, promote science, technology, engineering and mathematics education, especially for women, drive investments and encourage digital education and training. Banks in particular can play a crucial role in driving change for development.

79. A human-centric approach should be at the core of digital development. Fostering digital inclusion and providing new opportunities and easy access to services for disadvantaged groups of society requires special attention. Consideration should be given to the needs of persons with disabilities.

80. The COVID-19 pandemic highlighted the importance of meaningful connectivity and technologies for social connections and mental well-being. Initiatives that use technology to bridge the digital divide and foster intergenerational communication create a more inclusive and resilient society for people of all ages.

81. Evidence-based policymaking is essential for advancing digital development, but this requires strengthened data collection efforts at national and regional levels. To gain trust and confidence in ICTs, accurate, inclusive, disaggregated and intersectional statistical data can improve transparency, foster social dialogue and enhance public participation.

82. Digital infrastructures need to be robust and resilient, which is a challenge, especially in the least connected regions. Data governance frameworks should address current challenges in data protection, digital technologies and artificial intelligence, while also anticipating future developments.

83. New challenges are emerging. The concentration of power in some technology giants, including in connection with the development of artificial intelligence, can create new divides. International cooperation is required to address cyberthreats. Ensuring the resilience and protection of information technology networks and systems that support the functions of defence, national security, public order and governance requires consolidated cybersecurity legislation. Authorities should intervene whenever technological advances could make institutions’ information technology systems vulnerable to cyberattacks.

84. Digital technologies can be used to address environmental challenges. Pollutant release and transfer register systems collect and disseminate information about environmental releases and transfers of hazardous substances from industrial and other facilities. These environmental information tools are important for pollution management and the assessment of resource consumption. They facilitate data exchange in a transparent way.

85. The Council of Europe has been tackling the issue of digital transition, aiming to ensure that fundamental values, human rights and the rule of law and democracy are also defended in a digital environment. Priorities include the use and development of artificial intelligence, the protection of children’s rights and gender equality in a digital environment, and action to address cybercrime and violence against women.

86. The European Commission uses a guiding strategic framework based on four dimensions: people, business, Government and infrastructure. The European Declaration on Digital Rights and Principles for the Digital Decade promotes European Union values and a sustainable human-centric vision of digital transformation.
87. Young people believe that there should be a collective human-centric vision and digital justice so that all can benefit. To bridge the digital divide, young people, especially girls, should be empowered and their initiatives supporting sustainable goals should be promoted. Regional and local skill programmes can have strong impacts. Translating key documents into local languages will broaden understanding and engagement.

88. Civil society points out that the majority of those who are unconnected are women, girls, marginalized groups such as older persons, and those with disabilities or language barriers. There is insufficient data on many of the targets, which often lack intersectional gender disaggregation. Artificial intelligence is moving at a rapid speed. Human control over it is needed to prioritize human rights against unchecked progress.

89. Digital poverty is a critical issue; initiatives such as the Unconnected Foundation make a difference by connecting students, refugees, women and underserved communities with the help of donors, sponsors and other organizations. Strategic platforms such as the Digital for Development (D4D) Hub strengthen sustainable digital cooperation between the European Union and its member States, by engaging with different stakeholders.

90. Digital inclusion requires a multi-stakeholder approach and can benefit from collaboration with a diverse ecosystem. Progress depends on partnerships and learning from failures and achievements. Collaboration would also avoid duplication, cut development costs, ensure project success and facilitate the development of proper regulation. Multi-stakeholder alliances such as the Partner2Connect Digital Coalition foster universal connectivity and digital transformation globally, mobilize investments and utilize partnerships effectively.

91. To strengthen the “One United Nations” approach, the United Nations needs to work together on digital development at the national, regional and global levels. Platforms such as the United Nations Digital Transformation Group for Europe and Central Asia are essential in this regard.

Plenary session: Advancing key transitions and cooperation towards achieving the Sustainable Development Goals in the Economic Commission for Europe region

92. The Summit of the Future offers a once-in-a-generation opportunity to reshape international cooperation, improve the response to global shocks and strengthen inclusion by meaningfully addressing the needs of current and future generations. There is an intricate linkage between the 2030 Agenda and the forthcoming document, “A Pact for the Future”. The Pact is expected not only to provide a boost to implementation of the Sustainable Development Goals but also to sustain the Goals into the future, once they are achieved.

93. The importance of global cooperation based on shared values and respect for international law was stressed by Latvia. The United States encouraged ECE to continue its work in supporting Ukrainian reconstruction and noted the opportunity that the Summit of the Future offered to rekindle trust in the power of multilateralism. In this context, both countries denounced the Russian Federation war against Ukraine. The Russian Federation rejected those statements as attempts to politicize the ECE platform.

94. The United Kingdom remarked that multilateralism should deliver real impact for all people and that the concepts of inclusion and multi-stakeholder participation were intertwined. Austria mentioned the importance of a bottom-up approach to sustainable development, which is embodied by ECE, and expressed the hope that “A Pact for the Future” would recognize the importance of regional cooperation for advancing sustainable development. The need to mobilize resources for developing
countries, including through reforms of multilateral banks to address their concerns, was stressed by Tajikistan. France emphasized the importance of a human rights-based approach and gender equality as a precondition for sustainable development, while drawing attention to the contributions that the “practical multilateralism” of Geneva could make to bring about concrete actions.

95. Civil society expressed concern about backsliding on key issues such as gender equality, ageism and sexual and reproductive health and rights. The importance of the Summit of the Future was acknowledged, given the changes in the world since the adoption of the 2030 Agenda and the need for acceleration. In a context of shrinking space for civil society, it was critical to create channels for its meaningful engagement in all processes.

96. While seeking to advance the key transformations necessary for accelerating implementation of the Sustainable Development Goals, there is a need to put in place locally relevant, synergistic, coherent and integrative strategies. National plans for implementation of the Goals should be built on a clear understanding of the linkages between them, prioritizing actions in areas that are lagging behind. Broad societal support is required to anticipate conflict and provide solutions to it, as some transformations may encounter resistance. Creating capacities in the public sector, including through learning partnerships, is necessary to manage these processes.

97. Building narratives for transformation becomes more challenging when there are also negative consequences, and complex choices need to be made. This is, however, necessary to guide the behaviour of all players involved, including consumers and investors. Markets do not provide signals to drive change in the right direction. Innovation is a powerful force, but it needs to be harnessed by appropriate policies to deliver societal goals and avoid harmful consequences.

98. Significant transformations lie ahead, with sizeable sectoral shifts that will create many opportunities but also generate large economic and social dislocations. Financial intermediaries that drive capital allocation in the right direction and technology can help to advance these transformations while minimizing disruptions.

99. Local efforts are critical for many goals across the whole 2030 Agenda, including addressing poverty or climate change. Policy coherence for sustainable development can be achieved only by engaging multiple levels of governance. The increased use of voluntary local reviews in the ECE region is a positive development, contributing to improved multi-level governance. The next ECE Forum of Mayors is ready to put into action the outcomes of the Summit of the Future at the local level.

100. Civil society stressed the need to shift the balance of economic priorities to focus on the well-being of people and the planet, building on human rights frameworks, including international humanitarian law. Social protection, lifelong education and recognition of the value of unpaid work are basic demands. Timely and accessible information should be provided to civil society actors for meaningful engagement. Political persecution for peaceful activities should be eliminated and political prisoners should be released across the region.

101. The contribution of children, adolescents and youth to drive and shape the necessary transformations is essential. Young people are not just the leaders of tomorrow but also the voices of change today. However, opportunities for meaningful youth participation are insufficient. There is a need to further develop and create spaces where young people can engage in decision-making processes. Education, including the integration of sustainability principles into school curricula, is pivotal to equip the next generation with the knowledge and skills they need to approach complex challenges.
